

POLYMER RHEOLOGY: THEORY AND PRACTICE

Yuri G. Yanovsky

CHAPMAN & HALL

Contents

Preface	v
1 Some Theoretical and Numerical Approaches to Describing the Viscoelastic Properties of Polymer Systems	1
1.1 Introduction	1
1.2 Single Molecule Approach in the Theory of Viscoelasticity of Polymer Concentrated Solutions and Melts	3
1.3 Imitation Modeling by the Method of Brownian Dynamics of the Viscoelastic Behavior of Polymers	22
1.4 Structural Approach to Modeling the Behavior of Filled Polymers	29
1.5 A Geometric Approach to Modeling the Behavior of Filled Polymers	36
1.6 Conclusion	52
References	53
2 Rheological Properties, Relaxation Behavior, and Rupture of Polymers at Temperatures above their Glass Transition Temperature	57
2.1 Introduction	57
2.2 Viscoelastic Behavior in Low-Amplitude Shear	60
2.3 Viscoelastic Behavior in Continuous Shear Deformation	81
2.4 Viscoelastic Behavior in Uniaxial Extension	87
2.5 Relaxation Transition of Polymers in the Triaxial Stressed State	94
2.6 Relation between Relaxation Properties and Laws of Polymer Fracture	96
References	109

3	Rheological Relaxation Properties of Polymer Blends . . .	112
3.1	Introduction	112
3.2	General Problems of Description of Polymer Blends Properties	114
3.3	Qualitative Appraisals of Structural-Morphological Properties of Blends: Classification	116
3.4	Rheological Properties of Limitedly Compatible Blends	125
3.5	Rheological Properties of Incompatible Blends . . .	135
3.6	Model Approaches	141
3.7	Conclusion	164
	References	167
4	Rheological and Relaxation Properties of Copolymers . . .	171
4.1	Introduction	171
4.2	General and Specific Features	171
4.3	Two-Block Copolymers	175
4.4	Three-Block Copolymers	178
4.5	Features of the Rheological and Relaxation Behavior of Compositions Including Copolymers	191
	References	198
5	Rheological and Relaxation Properties of Filled Polymers . .	200
5.1	Introduction	200
5.2	Properties of a Polymer in a Filled System	203
5.3	Properties of a Filler in a Filled System	206
5.4	Physicochemical Aspects of Reinforcement	208
5.5	Some Aspects of the Rheological Appraisal of Mixing Quality	209
5.6	Model Behavior of Viscoelastic Properties of Filled Polymers	212
5.7	Influence of Filler 'Activity'	248
5.8	Dynamic Rheological Characterization	251
5.9	Relation between Rheological and Strength Characteristics	254
5.10	Relaxation Behavior	260
5.11	Conclusion	268
	References	269
	Appendix 1. The Prototype Program of the Brownian Dynamic Method	276

Appendix 2. The Prototype Program of the Finite Element Method	289
Index	295
