

THIS BOOK
INCLUDES
CD-ROM

RELATING MATERIALS PROPERTIES TO STRUCTURE

Handbook and Software for
Polymer Calculations
and Materials Properties

D. J. DAVID
ASHOK MISRA

Table of Contents

Preface xxvii

1. STRUCTURAL CONSIDERATIONS/ WHY MATERIALS DIFFER	1
1.1 Introduction	1
1.2 Atomic Packing and Structure	4
1.3 Consequences of Packing	8
1.4 Comparison of Density of Metals Using the Hard Ball Model	11
1.5 Bonds and Bond Types	14
1.5.1 Metals and Metallic Bonding	14
1.5.2 Covalent Bonding	16
1.5.3 Ionic Bonding	19
1.5.4 Van der Waals Bonds	22
1.5.5 Summary of Bond Types	23
1.6 Packing Consequences of Non-Directionally Bonded Atoms of Unequal Size	23
1.7 Ceramic Structures	24
1.7.1 Interstitial Positions	27
1.8 Polymer Structures	27
1.8.1 General	27
1.8.2 Configurations of Polymer Chains	32
1.8.3 Classification of Polymers	34
1.8.4 Polymer Property Estimation	37
1.9 Ceramic-Glass Structure	37
1.9.1 Definition	37

1.10	Effects of Structure on Electrical Conductivity	41
1.10.1	<i>Structural Imperfections</i>	41
1.10.2	<i>Electronic Structure</i>	42
1.10.3	<i>Metals</i>	43
1.10.4	<i>Semiconductors and Insulators</i>	44
1.11	Abbreviations and Notation	48
1.12	General References	49

2. MORPHOLOGY OF MATERIALS, THERMODYNAMICS, AND RELATIONSHIP TO PROPERTIES. 51

2.1	Foundations of Materials Science	51
2.1.1	<i>Metals</i>	53
2.1.2	<i>Ceramics</i>	54
2.1.3	<i>Polymers</i>	56
2.2	Morphology/Property Relationships	59
2.2.1	<i>Metals Morphology/Microstructure</i>	59
2.2.2	<i>Ceramic Morphology/Microstructure</i>	62
2.2.3	<i>Polymer Morphology</i>	64
2.3	Polymer Structure/Property Relationships	77
2.4	Thermodynamics	79
2.4.1	<i>Introduction/Elementary Thermodynamics</i>	79
2.4.2	<i>Thermodynamic Classification</i>	79
2.5	Phase Transitions	86
2.5.1	<i>Pure Assembly of One Species</i>	87
2.5.2	<i>Definitions and Relationships to Thermodynamic Quantities</i>	87
2.6	Molecular Weight Concepts	90
2.7	Abbreviations and Notation	96
2.8	Specific References	97
2.9	General References	98

3. POLYMER ORIENTATION AND RUBBER ELASTICITY. 101

3.1	Orientation in Polymers	101
-----	-------------------------	-----

3.2 Detection of Molecular Orientation in Polymers 102

3.2.1 Detection of Orientation with X-rays 102

3.2.2 Detection of Orientation with Birefringence 104

3.3 Effect of Molecular Orientation on Mechanical Properties 105

3.4 Rubber Elasticity 106

3.4.1 Thermodynamics 108

3.5 Abbreviations and Notation 116

3.6 Specific References 117

3.7 General References 117

4. EFFECTIVE USE OF SPREADSHEETS FOR SCIENTIFIC APPLICATIONS AND ESTIMATION OF MATERIALS PROPERTIES AND MISCIBILITY 119

A Guide to Using MATPROP[®]

4.1 Introduction and Background 119

4.2 Business vs. Scientific 123

4.3 MATPROP[®] Essentials 124

4.4 MATPROP[®] Components 124

4.5 Files-MATPROP[®] Menu 126

4.5.1 Additional Command Information 130

4.6 MATPROP[®] Start Up 130

4.7 Working with MATPROP[®] 131

4.8 Choosing Groups and Estimating Properties 133

4.9 Unavailable Properties 133

4.10 Group Selection Alternatives 137

4.11 Special and Navigation Keys 140

4.12 Calculating Free Enthalpy of Formation (ΔH_f°) 140

4.13 Special Entry Groups 142

4.14 Working with the Edit MATPROP[®] Menu 147

4.15 Working with the Data Query Menu 149

4.16 Working with the Window MATPROP[®] Menu 153

4.16.1	<i>Worksheets as a Result of the WindowsTM-Tile Command and Active Workbooks Minimized as Shown by the Lower Icons</i>	155
4.17	Working with the Help MATPROP [®] Menu	158
4.18	Estimating Polymer Miscibilities Using MPCalc and Entering Data	158
4.18.1	<i>Molcalc and MPCalc</i>	159
4.18.2	<i>MPCalc</i>	161
4.19	Graphing Miscibility Results of MPCalc	162
4.20	Printing Graph Results	163
4.21	Database Workbooks of MATPROP [®]	164
4.21.1	<i>Plastics Database</i>	164
4.21.2	<i>Rubber and Elastomers Database</i>	165
4.21.3	<i>General Material Properties Database</i>	165
4.21.4	<i>Solubility Parameter Database</i>	165
5.	POLYMER PROPERTY ESTIMATION AND ESTIMATED PROPERTIES OF SELECTED POLYMERS	169
5.1	Introduction	169
5.2	Basis of Molecular Property Estimation	169
5.2.1	<i>Types of Molar Properties</i>	169
5.3	Additivity and Properties from Group Contributions	170
5.4	Examples of Estimated Polymer Properties from Selected Groups	174
5.5	Calculated Molecular Properties of Representative Polymer Classes	177
5.6	Abbreviations and Notation	202
5.7	General References	204
6.	MOLECULAR FORCES AND VOLUMETRIC PROPERTIES.	205
6.1	Introduction	205
6.2	van der Waals Forces	205

6.3	Interaction of Forces between Molecules	206
6.3.1	<i>Coulombic Interactions</i>	208
6.3.2	<i>Charge Induced Polarization</i>	208
6.3.3	<i>Dipole Interactions</i>	209
6.3.4	<i>Induced Polarization Interactions</i>	211
6.4	Definition of van der Waals Forces	213
6.5	Potential Energy Curves Describing Molecular Interactions	214
6.6	Mass and the Packing of Matter	216
6.7	Volumetric Properties and Their Estimation	216
6.7.1	<i>Rubbery Volumes (V_R)</i>	217
6.7.2	<i>Glassy Volumes (V_g)</i>	218
6.7.3	<i>The van der Waals Volume</i>	219
6.7.4	<i>Crystalline Volumes</i>	219
6.8	Thermal Expansion	220
6.9	General Factors Affecting Thermal Expansion	222
6.10	Estimation of Thermal Properties	223
6.10.1	<i>Molar Thermal Expansivity</i>	223
6.10.2	<i>Specific Thermal Expansivity</i>	224
6.10.3	<i>Cubic Coefficient of Thermal Expansion</i>	225
6.10.4	<i>Linear Coefficient of Thermal Expansion</i>	225
6.11	General Expressions for Molar Volumes as a Function of Temperature	225
6.12	MPCalc Property Estimations That Employ Volume Estimations and Comparison to Literature Values	226
6.13	Abbreviations and Notation	235
6.14	General References	237

7. CALORIMETRIC PROPERTIES 239

7.1	Introduction	239
7.2	Internal Energy	240
7.2.1	<i>Crystalline Solids</i>	240

7.2.2	<i>Polymeric Materials</i>	241
7.3	Partition Functions	242
7.4	Comparison of Partition Functions	243
7.5	Heat Capacity	244
7.6	Equations of State	247
7.6.1	<i>Crystalline Materials</i>	247
7.6.2	<i>Polymeric Materials</i>	249
7.7	Latent Heat of Crystallization and Fusion (Melting)	250
7.8	Estimation of Calorimetric Properties	251
7.8.1	<i>Heat Capacities</i>	251
7.8.2	<i>Heat of Fusion</i>	252
7.9	Molcalc Estimations of Calorimetric Properties and Comparison to Literature Values for a Series of Representative Polymers	253
7.10	Abbreviations and Notation	254
7.11	Specific References	255
7.12	General References	256

8. STRUCTURE/TRANSITION

TEMPERATURE RELATIONSHIPS 257

8.1	Introduction	257
8.2	Classification and Origin of Multiple Transitions in Polymers	257
8.3	Detection	258
8.4	Origins	261
8.4.1	$T < T_g$	261
8.4.2	$T = T_g$	263
8.4.3	$T > T_g$	268
8.4.4	$T_g < T < T_m$	268
8.4.5	$T = T_m$ (<i>Melting Point Temperature</i>)	268
8.4.6	$T > T_m$	269
8.5	Relationship of T_g to T_m	270
8.6	Other Factors Influencing T_g	270
8.6.1	<i>Pressure Dependence of T_g</i>	270
8.6.2	<i>Molecular Mass</i>	271

8.6.3	<i>Tacticity</i>	271
8.6.4	<i>Crosslinking</i>	271
8.7	Metals and Ceramics	272
8.8	Estimation of the T_g and T_m of Polymers	275
8.8.1	<i>The Glass Transition (T_g)</i>	275
8.8.2	<i>The Crystalline Melting Point (T_m)</i>	276
8.9	Exceptions	277
8.9.1	<i>Aliphatic</i>	277
8.10	Molcalc Transition Temperature Estimates of T_g and T_m and Comparison to Literature Values for a Series of Representative Polymers	279
8.11	Abbreviations and Notation	283
8.12	Specific References	285
8.13	General References	286
9.	COHESIVE PROPERTIES AND SOLUBILITY	
	PARAMETER CONCEPTS	287
9.1	Introduction and Background	287
9.2	Cohesive Energy Density and the Solubility Parameter	288
9.3	Solubility Parameters in Mixing	290
9.4	Calculation of Solubility Parameters from Physical Constants	291
9.5	Solubility Parameters Based upon Group Contributions	292
9.6	Application of the Solubility Parameter Concept to a Wide Range of Materials	293
9.7	Estimation of Solubility Parameters	297
9.8	Molcalc Estimations of Solubility Parameters and Comparison to Literature Values for a Series of Representative Polymers	298
9.9	Solubility Parameters of Metals	300
9.10	Abbreviations and Notation	302
9.11	Specific References	303
10.	INTERFACIAL PROPERTIES	305
10.1	Introduction	305

10.2	Surface Concepts	305
10.2.1	Definition	305
10.2.2	Surface Thermodynamic Functions	306
10.2.3	Surface Work and Energy of a One Component System	307
10.3	Contact Angle Equilibrium: The Young Equation	309
10.3.1	Spreading Pressure	311
10.3.2	Work of Adhesion	311
10.4	Surface Tensions of Multi-Component Mixtures	312
10.5	Surface Tensions of Binary Mixtures	314
10.6	Effect of Temperature	315
10.7	Effect of Chemical Composition	318
10.8	Effect of Molecular Weight	319
10.9	Effects of Phase Transitions	320
10.10	Estimation of Surface Energy of Liquids and Polymers	321
10.11	Estimation of Surface Tension of Liquids from Related Properties	322
10.12	Molcalc Estimations of Solubility Parameters and Comparison to Literature Values for a Series of Representative Polymers	324
10.13	Abbreviations and Notation	326
10.14	Specific References	327
10.15	General References	329
11.	SOLUTION PROPERTY RELATIONSHIPS.	331
11.1	Introduction	331
11.2	Types of Solutions	331
11.2.1	Basic Considerations	331
11.2.2	Ideal Solutions	333
11.2.3	Regular Solutions	334
11.3	The Configuration of Polymer Molecules	335
11.4	Average Dimensions of Macromolecules	337
11.5	Definitions of End-to-End Distance	337
11.6	Conformational Models	339

11.7	Factors Influencing the Flow of Solutions	342
11.8	Macromolecule Relationships in Dilute Solution	345
11.8.1	<i>Extended Linear Macromolecules</i>	345
11.8.2	<i>Unperturbed Random Coil Macromolecules</i>	346
11.9	Steady State Viscosity of Polymer Solutions	347
11.10	Expressions for the Viscosity of Polymer Solutions	347
11.10.1	<i>Inter-relationships of Intrinsic Viscosity</i>	349
11.11	Molcalc Estimations of the Unperturbed Viscosity Coefficient, K_0 , and Comparison to Literature Values for a Series of Representative Polymers	350
11.12	Abbreviations and Notation	352
11.13	Specific References	354
11.14	General References	355
12.	OPTICAL PROPERTIES OF POLYMERS	357
12.1	Introduction	357
12.2	Interaction of Light with Polymers	358
12.3	Refraction of Light by Polymers	361
12.4	Molcalc Estimations of the Refractive Index, n_D , and Comparison to Literature Values for a Series of Representative Polymers	362
12.5	Reflection of Light by Polymers	364
12.6	Birefringence	365
12.7	Absorption of Light by Polymers	367
12.8	Optical Appearance of Polymers	368
12.9	Light Scattering	369
12.10	Solid State Light Scattering	371
12.10.1	<i>Refractive Index Fluctuations in Glassy Polymers</i>	372
12.10.2	<i>Refractive Index and Orientation Fluctuations in Semi-Crystalline Polymers</i>	373

12.11	Applications	374
12.12	Abbreviations and Notation	375
12.13	General References	376
13.	ELECTRICAL PROPERTIES	379
13.1	Introduction	379
13.2	Contrasts between Materials	380
13.2.1	Conductivity	380
13.2.2	Other Considerations	382
13.2.3	Dielectric Properties (Linear Dielectrics)	383
13.2.4	Ferroelectric Materials (Non-Linear Dielectrics)	384
13.2.5	Ferromagnetic Materials	385
13.3	Theoretical Aspects	385
13.4	Electrical Breakdown	392
13.4.1	Types of Breakdown	392
13.5	Measurement Techniques	393
13.6	Alternating Current Characteristics	393
13.7	Static Charge and Triboelectrification	399
13.8	Electrically Conductive Polymers	402
13.9	Piezo- and Pyroelectric Polymers	403
13.10	Applications	403
13.11	Molcalc Estimations of the Dielectric Constant, ϵ , and Comparison to Literature Values for a Series of Representative Polymers	404
13.12	Abbreviations and Notation	406
13.13	Specific References	407
13.14	General References	407
14.	MAGNETIC PROPERTIES	409
14.1	Introduction	409
14.2	Origin and Classification of Magnetism	409
14.3	Classification of Types of Magnetization	412
14.4	Magnetic Resonance	418
14.4.1	NMR	419

14.4.2	<i>High Resolution NMR</i>	421
14.4.3	<i>Chemical Shift</i>	421
14.4.4	<i>Spin-Spin Interactions</i>	422
14.4.5	<i>Time Dependent Effects</i>	422
14.5	Methods of Band and Line Narrowing for NMR of Solid Polymers	423
14.6	Abbreviations and Notation	424
14.7	Specific References	425
14.8	General References	425

15. VISCOELASTICITY AND

MECHANICAL PROPERTIES 427

15.1	Introduction	427
15.2	Definitions	428
15.3	Regions of Viscoelasticity	432
15.4	Time Temperature Superposition	434
15.5	Creep and Stress Relaxation	436
15.6	Dynamic Mechanical Properties	436
15.7	Mechanical Models	440
15.7.1	<i>Maxwell Model</i>	442
15.7.2	<i>Voigt Element</i>	445
15.7.3	<i>Other Models</i>	447
15.7.4	<i>Maxwell-Wiechert Model</i>	448
15.7.5	<i>Voigt-Kelvin Model</i>	449
15.8	Molecular Models	450
15.8.1	<i>Bead and Spring Model</i>	450
15.8.2	<i>Reptation Model</i>	453
15.9	Mechanical Properties—General	455
15.10	Tensile Properties	457
15.10.1	<i>Ultimate Strength</i>	460
15.11	Toughness and Impact Strength	460
15.11.1	<i>Toughness</i>	460
15.11.2	<i>Impact Strength</i>	461
15.12	Flexural Strength	463
15.13	Compressive Strength	463
15.14	Creep Rupture	464

15.15	Failure	464
15.16	Fatigue	466
15.17	Hardness	467
	15.17.1 Indentation Hardness	467
	15.17.2 Types of Indentation Hardness Tests	468
15.18	Friction	469
15.19	Molcalc Estimations of Elastic Properties and Comparison to Literature Values	471
15.20	Abbreviations and Notation	474
15.21	General References	475
16.	ACOUSTIC PROPERTIES	477
16.1	Introduction	477
16.2	Sound Wave Fundamentals	477
16.3	Plane Sound Waves	484
16.4	Relationship of Elastic Properties to Sound Wave Velocities	485
	16.4.1 Stress	485
	16.4.2 Displacement and Strain	485
	16.4.3 Hooke's Law and Elasticity	487
	16.4.4 Equation of Motion	487
	16.4.5 Conservation of Mass	487
	16.4.6 The Wave Equation and Definition of the Propagation Constant	488
	16.4.7 Sound Wave Propagation Comparisons	488
16.5	Theoretical Relationships of the Elastic Parameters to Sound Velocity	491
16.6	Additive Molar Functions for Sound Propagation	492
16.7	Sonic Absorption	493
16.8	Molcalc Estimations of Sound Speeds and Comparison to Literature Values	494
16.9	Abbreviations and Notation	497
16.10	Specific References	499
16.11	General References	499

17. RHEOLOGICAL PROPERTIES OF POLYMER MELTS	501
17.1 Introduction	501
17.2 Viscosity and Shear Flow	502
17.3 Effect of Molecular Weight	505
17.4 Effect of Temperature	507
17.5 Simple Shear Flow	510
17.6 Measurement of Viscosity	512
17.6.1 Capillary Viscometer (Poiseuille Flow)	513
17.6.2 Cup and Bob Viscometer	513
17.6.3 Cone and Plate Viscometer	514
17.7 Normal Stress	514
17.8 Simple Elongational Flow	515
17.9 Non-Newtonian Fluids	515
17.9.1 Truncated Power Law	516
17.9.2 Ellis Model	516
17.9.3 Carreau Model	517
17.10 Molcalc Estimations of the Critical Molecular Weight M_{cr} , and the Activation Energy $E_{\eta}(\infty)$	517
17.11 Abbreviations and Notation	518
17.12 General References	519
18. TRANSFER PROPERTIES OF MATERIALS	521
18.1 Introduction	521
18.2 Fundamental Concepts of Transfer Processes	521
18.2.1 The Thermal Conduction Model	521
18.2.2 The Diffusion Transport Process	522
18.3 Heat Transfer Mechanisms	524
18.4 Thermal Conductivity	526
18.5 Estimation of the Thermal Conductivity of Polymers	529
18.6 Additive Molar Functions for Thermal Conductivity and Molcalc Estimations of Thermal Conductivities and Comparisons to Literature Values	530

18.7	Mechanisms and Equations of Diffusion	532
18.7.1	<i>Steady-State Diffusion through a Plane Membrane</i>	534
18.8	Solubility	537
18.8.1	<i>Gases</i>	537
18.9	Permeation of Polymers	539
18.10	Complex Permeation	541
18.11	An Additive Molar Function for Permeation of Simple Gases	543
18.12	Molcalc Estimations of Permeability	544
18.13	Abbreviations and Notation	547
18.14	Specific References	548
18.15	General References	549
19.	FORMATION AND DECOMPOSITION PROPERTIES OF MATERIALS.	551
19.1	Introduction	551
19.2	Thermodynamics Relative to Formation	551
19.3	Free Enthalpy of Reaction from Group Contributions	556
19.4	Molcalc Estimations and Comparisons to Literature Values for Free Enthalpy of Formation	558
19.4.1	<i>General</i>	558
19.4.2	<i>Factors Influencing Calculations</i>	559
19.5	Stability/Decomposition	561
19.5.1	<i>General</i>	561
19.5.2	<i>Thermal Stability</i>	564
19.6	Molcalc Estimations and Comparisons to Literature Values for Thermal Decomposition	567
19.7	Abbreviations and Notation	569
19.8	Specific References	570
19.9	General References	571
20.	PROCESSING OF THERMOPLASTICS	573
20.1	Introduction	573

20.2	Classification of Processing Operations	575
20.3	Extrusion Processes	576
20.3.1	General	576
20.3.2	Special Cases	579
20.3.3	Twin Screw Extruders	579
20.3.4	Extrusion Based Products	580
20.4	Injection Molding	582
20.5	Blow Molding	585
20.5.1	General	585
20.5.2	Extrusion Blow Molding	586
20.5.3	Injection Blow Molding	589
20.6	Thermoforming	589
20.6.1	General	589
20.6.2	Vacuum Forming	590
20.6.3	Pressure Forming	590
20.6.4	Matched Mold Forming	591
20.6.5	Thermoformed Products	592
20.7	Rotational Molding	592
20.8	Calendering	594
20.9	Coating Operations	594
20.10	Mixing	597
20.10.1	General	597
20.10.2	Batch Mixers	597
20.10.3	Continuous Mixers	598
20.11	New Processing Technologies	599
20.11.1	General	599
20.11.2	Some Examples of Recent Developments	600
20.12	General References	601
21.	MISCIBILITY AND ESTIMATION OF POLYMER BLENDS MISCIBILITY.	603
21.1	Introduction and Background	603
21.1.1	Metals, Ceramics, and Polymers	604
21.2	Terminology and Basic Definitions	604
21.3	Metals	605

21.3.1	<i>Homogeneous Mixtures and Mixing</i>	607
21.3.2	<i>Interstitial and Substitutional Atoms</i>	612
21.3.3	<i>Ideal and Non-Ideal Solutions</i>	614
21.3.4	<i>One Component Systems</i>	616
21.3.5	<i>Two Component Systems</i>	617
21.4	<i>Polymer Miscibility</i>	620
21.4.1	<i>Introduction</i>	620
21.4.2	<i>Polymer/Polymer Miscibility</i>	621
21.4.3	<i>General Principles of Thermodynamics and Phase Equilibria</i>	624
21.5	<i>Miscibility of Metals vs. Polymers</i>	632
21.6	<i>Estimation of Polymer Miscibility</i>	634
21.7	<i>General Guidelines for Interpretation of MP Results</i>	638
21.8	<i>Application Results of the Miscibility Parameter (MP) Model</i>	640
21.9	<i>Mechanisms of the Miscibility Parameter Model</i>	648
21.10	<i>Other Approaches for Determining Polymer Blends Miscibility</i>	649
21.11	<i>Estimation of Metals Miscibility</i>	651
21.12	<i>Abbreviations and Notation</i>	653
21.13	<i>Specific References</i>	654
21.14	<i>General References</i>	657

22. COMPOSITES: CONCEPTS AND PROPERTIES 659

22.1	<i>Introduction</i>	659
22.2	<i>Fiber Filled Composites</i>	660
22.2.1	<i>Matrix Materials</i>	660
22.2.2	<i>Reinforcing Fibers</i>	661
22.3	<i>Moduli of Fiber Reinforced Composites</i>	662
22.3.1	<i>Continuous Fiber Composites</i>	663
22.3.2	<i>Discontinuous Fiber Composites</i>	666
22.4	<i>Strength of Fiber Reinforced Composites</i>	672
22.5	<i>Other Mechanical Properties</i>	674
22.6	<i>Forming Processes</i>	675

22.6.1	Hand Lay-Up	676
22.6.2	Spray-Up	676
22.6.3	Compression Molding	677
22.6.4	Pultrusion	677
22.6.5	Filament Winding	678
22.6.6	Vacuum Bag/Pressure Bag Autoclave	678
22.6.7	Reinforced Reaction Injection Molding	678
22.6.8	Resin Transfer Molding	678
22.6.9	Reinforced Thermoplastics	679
22.7	Summary of Major Property Influences	679
22.8	Abbreviations and Notation	680
