

Essentials of **Polymer Science** and **Engineering**

PAUL C. PAINTER
MICHAEL M. COLEMAN

Table of Contents

Preface xv

Acknowledgements xvii

1 INTRODUCTION	1
Preliminary Rant	1
<i>What Is a Polymer?</i>	2
<i>How Big are Polymers?</i>	2
<i>Classification</i>	4
The Early History of Polymers	5
<i>Schönbein and Nitrated Cellulose</i>	5
<i>Parkes, Hyatt and the Elephants</i>	7
<i>Regenerated Cellulose</i>	10
<i>The Growth of Polymers and the Birth of Polymer Science</i>	11
Polymer Materials: Boon or Bane?	13
<i>Are Plastics Just Cheap and Nasty Materials?</i>	13
<i>Traditional versus Synthetic Materials</i>	14
<i>Do Traditional Materials Get a Break?</i>	15
<i>Plastics, Energy and the Environment</i>	16
<i>Polymers: No Need to Apologize</i>	21
Recommended Reading	21
Some Useful Websites	22
Study Questions	22
 2 MICROSTRUCTURE AND MOLECULAR WEIGHT	 23
Polymer Microstructure	23
<i>Linear and Branched Polymers</i>	23
<i>Branching Types</i>	25
<i>Network Formation</i>	26
<i>Cross-Linking</i>	30
<i>Polymer Isomerism</i>	30
<i>Copolymers</i>	39

Molecular Weight	40
<i>Molecular Weight Distributions</i>	41
<i>Definition of Number and Weight Average Molecular Weight</i>	41
<i>Which Average Molecular Weight?</i>	43
Recommended Reading	44
Study Questions	44
 3 POLYMER SYNTHESIS	 47
Introduction	47
<i>Major Classifications</i>	47
<i>Condensation Reactions</i>	47
<i>Why Do Molecules React?</i>	49
<i>Basic Features of Step-Growth Polymerization</i>	50
<i>Basic Features of Addition Polymerization</i>	51
Step-Growth Polymerizations	52
<i>Polyesters</i>	52
<i>Polyamides (Nylons)</i>	53
<i>Polyurethanes</i>	57
<i>Transesterification</i>	58
<i>Network Formation</i>	61
Chain or Addition Polymers	63
<i>Free Radical Polymerization</i>	64
<i>Anionic Polymerization</i>	68
<i>Cationic Polymerization</i>	73
<i>Coordination Polymerization</i>	74
<i>Metallocene Catalysts</i>	76
<i>Living Free Radical Polymerization</i>	77
<i>Monomer Types for the Different Polymerization Methods</i>	77
Polymerization Processes	78
<i>Suspension Polymerization</i>	80
<i>Emulsion Polymerization</i>	81
<i>Multiphase Processes</i>	84
Recommended Reading	85
Study Questions	85
 4 POLYMERIZATION KINETICS	 87
Introduction	87
Chemical Kinetics	87
<i>Kinetics—A Superficial and Thoroughly Incomplete Review</i>	88
The Reactivity of Chain Molecules	92
The Kinetics of Step-Growth Polymerization	93
<i>The Extent of Reaction (p)</i>	93
<i>The Kinetics of Uncatalyzed Polyesterifications</i>	93
<i>The Kinetics of Catalyzed Polyesterifications</i>	95
The Kinetics of Chain Polymerizations	96
<i>Initiation</i>	97

<i>Propagation</i>	98
<i>Termination</i>	99
<i>Summary of Kinetic Equations</i>	99
<i>The Steady-State Assumption</i>	99
<i>The Rate of Polymerization</i>	101
<i>The Trommsdorff Effect</i>	102
<i>Conversion</i>	102
<i>Average Chain Length</i>	104
<i>Chain Transfer</i>	106
<i>Anionic Polymerization</i>	107
<i>Cationic Polymerization</i>	108
Recommended Reading	109
Study Questions	109
5 POLYMERIZATION: PROBABILITY AND STATISTICS	113
Introduction	113
<i>Probability of an Event.</i>	113
Statistics of Linear Polycondensation	114
<i>Non-Stoichiometric Equivalence</i>	115
<i>Chain Stoppers</i>	116
<i>The Probability that a Group has Reacted.</i>	116
<i>The Probability of Finding an X-mer</i>	117
<i>The Number and Weight Fraction of X-mers.</i>	118
<i>The Number and Weight Distribution Functions</i>	118
<i>The Schulz-Flory Distribution</i>	119
<i>Polydispersity</i>	120
Statistics of Chain Polymerizations	120
<i>Free Radical Polymerization</i>	121
<i>Ionic Polymerizations</i>	121
<i>Living Polymerizations</i>	122
Branching and Gelation	122
<i>Theory of Gelation</i>	124
<i>The α Parameter</i>	125
<i>Critical Value of α</i>	128
<i>Gelation: Theory Versus Experiment</i>	128
<i>Random Branching Without Network Formation</i>	130
Recommended Reading	132
Study Questions	132
6 COPOLYMERIZATION	135
Introduction	135
Kinetics of Chain-Growth Copolymerization	138
<i>Free Radical Copolymerization</i>	138
<i>Terminal Model</i>	138
<i>Deriving the Copolymer Equation</i>	139
<i>The Steady-State Assumption</i>	140
<i>Reactivity Ratios</i>	141

<i>Composition Drift</i>	142
<i>Determination of Reactivity Ratios</i>	145
<i>The Mayo-Lewis Plot</i>	147
<i>The Fineman-Ross Plot</i>	147
<i>The Kelen-Tüdös Plot</i>	147
<i>Monomer Reactivity and the Q-e Scheme</i>	148
Copolymer Sequence Distributions	149
<i>General Statistical Relationships</i>	149
<i>Conditional Probability</i>	151
<i>Conditional Probabilities of Different Orders</i>	152
<i>Some Useful Parameters</i>	153
<i>The Number Fraction Sequence of Units</i>	153
<i>The Number Average Length of A (and B) Runs</i>	154
<i>The Run Fraction or Number</i>	155
<i>A Measure of the Departure from Randomness</i>	155
<i>Terminal Model Revisited</i>	156
<i>Composition as a Function of Conversion</i>	158
<i>Penultimate Model</i>	160
<i>Testing the Models</i>	163
Recommended Reading	164
Study Questions	164
 7 SPECTROSCOPY AND THE CHARACTERIZATION OF CHAIN MICROSTRUCTURE	 167
Introduction	167
<i>Simple Harmonic Motion</i>	168
<i>Molecular Transitions</i>	171
Molecular Spectroscopy of Polymers	172
<i>Instrumentation</i>	172
<i>Infrared Spectroscopy</i>	173
<i>NMR Spectroscopy</i>	175
<i>¹H NMR</i>	177
<i>¹³C NMR</i>	179
Characterization of Microstructure	180
<i>Polymer Identification</i>	181
<i>Branching</i>	181
<i>Sequence Isomerism</i>	183
<i>Structural Isomerism</i>	187
<i>Tacticity in Vinyl Polymers</i>	189
<i>Propagation Mechanisms</i>	196
<i>Copolymer Analysis</i>	197
Recommended Reading	202
Study Questions	202
 8 STRUCTURE AND MORPHOLOGY	 205
Introduction	205

States of Matter	205
<i>Bonding and Intermolecular Interactions</i>	208
Conformations	211
<i>The Number of Chain Conformations</i>	214
<i>The Chain End-to-End Distance</i>	215
<i>Random Walks and Random Flights</i>	215
<i>Real Chains</i>	221
<i>The Kuhn Segment Length</i>	222
<i>Self-Avoiding Walks</i>	222
Order and Morphology	223
<i>Ordered Chain Conformations</i>	224
<i>Chain Arrangements and Morphology</i>	230
<i>Polymer Single Crystals</i>	230
<i>Chain Folding</i>	231
<i>Melt Crystallization</i>	233
<i>Size and Properties</i>	234
<i>Crystallization and Properties</i>	235
<i>Fibers</i>	235
<i>Block Copolymers</i>	237
Recommended Reading	241
Study Questions	241
9 NATURAL POLYMERS	243
Introduction	243
Polypeptides and Proteins	247
<i>Proteins as Copolymers</i>	247
<i>The Amide Bond</i>	248
<i>Amino Acids</i>	248
<i>Some Final Observations on Polypeptide Microstructure</i>	250
The Conformation of Polypeptides and Proteins	253
<i>The Ramachandran Plot</i>	255
<i>The Structure of Silk</i>	255
<i>Spider Silk</i>	258
<i>The Structure of Collagen</i>	259
<i>The Structure of Keratin</i>	261
<i>Final Words on Protein Structure</i>	264
Polysaccharides	265
<i>The Structure of Cellulose</i>	268
<i>Energy Storage Polysaccharides: Amylose, Amylopectin and Glycogen</i>	268
<i>Chitin</i>	270
Poly(Nucleic Acids): DNA and RNA	271
<i>Introduction</i>	271
<i>Structure of DNA and RNA</i>	272
<i>RNA—More to Come?</i>	276
Recommended Reading	278
Study Questions	278

10 CRYSTALLIZATION, MELTING AND THE GLASS TRANSITION	281
Introduction	281
A Superficial and Thoroughly Incomplete Review of Thermodynamics	281
<i>The Laws of Thermodynamics</i>	<i>282</i>
<i>What is Thermodynamics?</i>	<i>282</i>
<i>The Ideal Gas Laws</i>	<i>283</i>
<i>Heat, Work and Energy</i>	<i>284</i>
<i>Entropy and the Second Law</i>	<i>287</i>
<i>Enter the Molecules</i>	<i>288</i>
<i>The Kinetic Theory of Gases</i>	<i>289</i>
<i>The Maxwell Distribution of Velocities</i>	<i>291</i>
<i>Entropy Revisited</i>	<i>292</i>
<i>Boltzmann's Equation</i>	<i>292</i>
<i>Free Energy</i>	<i>295</i>
Thermal Transitions in Polymers	296
Crystallization	298
<i>The Rate of Crystallization</i>	<i>299</i>
<i>The Avrami Equation</i>	<i>299</i>
<i>Thermodynamic Considerations</i>	<i>300</i>
<i>Critical Nucleus Size</i>	<i>301</i>
<i>Equilibrium Melting Temperature</i>	<i>302</i>
<i>Primary Nucleation</i>	<i>303</i>
<i>Homogeneous and Heterogeneous Nucleation</i>	<i>303</i>
<i>Secondary Nucleation</i>	<i>304</i>
<i>Lauritzen-Hoffman Theory</i>	<i>304</i>
<i>Fold Period and Crystal Growth Rate</i>	<i>305</i>
<i>Crystallization Regimes</i>	<i>307</i>
<i>Kinetics of Primary Crystallization</i>	<i>308</i>
<i>Secondary Crystallization</i>	<i>308</i>
The Crystalline Melting Temperature	309
<i>Melting Temperature of Polymer Crystals</i>	<i>310</i>
<i>Factors that Influence the Melting Temperature</i>	<i>311</i>
<i>Effect of Chemical Structure</i>	<i>311</i>
<i>Effect of Intermolecular Interactions</i>	<i>312</i>
<i>Entropy and Chain Flexibility</i>	<i>315</i>
<i>Effect of Solvents</i>	<i>316</i>
<i>Effect of "Defects" and Molecular Weight</i>	<i>317</i>
The Glass Transition Temperature	318
<i>Glassy Solids and the Glass Transition</i>	<i>318</i>
<i>Free Volume</i>	<i>319</i>
<i>Free Volume, Viscosity and the Glass Transition</i>	<i>320</i>
<i>Thermodynamic and Kinetic Aspects of the T_g</i>	<i>321</i>
<i>Effect of Molecular Weight</i>	<i>322</i>
<i>Effect of Chemical Structure</i>	<i>325</i>
<i>Effect of Cross-Linking and Crystallization</i>	<i>326</i>
<i>Effect of Diluents</i>	<i>327</i>

Random Copolymers and Blends	328
Recommended Reading	329
Study Questions	329
11 POLYMER SOLUTIONS AND BLENDS	331
Introduction	331
Entropy of Mixing	333
Molecules of Different Sizes	335
Enthalpy of Mixing	337
Flory's χ Parameter	338
The Flory-Huggins Equation	339
Cohesive Energy Density	340
Solubility Parameters	343
Group Contributions	344
Phase Behavior	345
The Critical Value of χ	350
Some Limitations of the Flory-Huggins Theory	352
Dilute Solutions	353
Recommended Reading	355
Study Questions	355
12 MOLECULAR WEIGHT AND BRANCHING	357
Introduction	357
Virial Equations	358
Osmotic Pressure	361
Light Scattering	366
Electromagnetic Fields	367
Origin of Light Scattering	369
Liquids and Solutions	372
Light Scattering from Polymers	374
Light Scattering from Random Coil Polymers	375
Zimm Plots	375
Viscosity	376
Poiseuille's Law	377
The Viscosity of Polymer Solutions	377
Intrinsic Viscosity and Molecular Weight	380
Viscosity Average Molecular Weight	381
Frictional Properties of Polymers in Solution	381
Size Exclusion Chromatography	383
Hydrodynamic Volume	387
The Universal Calibration Curve	388
Long Chain Branching	389
Long-Chain Branching in Polychloroprene	392
Recommended Reading	395
Study Questions	395

13 MECHANICAL AND RHEOLOGICAL PROPERTIES	399
Introduction	399
Mechanical Properties—Definitions	400
<i>Background</i>	400
<i>An Aside on Units</i>	404
<i>Poisson's Ratio</i>	405
<i>Bulk Modulus</i>	405
<i>Shear Modulus</i>	406
<i>Shear Forces in a Material under Tension</i>	408
Elastic Properties of Materials	408
<i>Hooke's Law</i>	408
<i>Stress/Strain Characteristics of Polymers</i>	410
<i>Stiffness</i>	411
<i>Tensile Strength</i>	414
<i>Brittle Versus Ductile Materials</i>	416
<i>Summary: Strength and Toughness</i>	419
Stress/Strain Characteristics of Polymers	422
<i>Yielding in Polymers</i>	422
Rubber Elasticity	426
<i>Thermodynamics Revisited</i>	427
<i>Networks</i>	430
<i>The Mooney-Rivlin Equation</i>	434
Polymer Melt Rheology	435
<i>Viscosity</i>	436
<i>Newtonian and Non-Newtonian Fluids</i>	437
<i>Entanglements and the Dynamics of Polymer Chains</i>	440
<i>Reptation</i>	441
<i>Melt Flow at High Shear Rates</i>	443
Viscoelasticity	445
<i>Creep</i>	445
<i>Stress Relaxation</i>	447
<i>Dynamic Mechanical Analysis</i>	448
<i>Time-Temperature Equivalence</i>	450
<i>Viscoelastic Behavior: Amorphous Polymers</i>	450
<i>Relaxation in Amorphous Polymers</i>	452
<i>Viscoelastic Behavior: Semi-Crystalline Polymers</i>	454
<i>Mechanical and Theoretical Models</i>	456
<i>Viscoelastic Behavior: Simple Models</i>	457
<i>The Maxwell Model</i>	458
<i>The Voigt Model</i>	460
<i>The Four-Parameter Model</i>	461
<i>Distributions of Relaxation and Retardation Times</i>	462
<i>Time-Temperature Superposition Principle</i>	464
<i>The WLF Equation</i>	467
<i>Relaxation Processes in the Glassy State</i>	468
<i>Relaxation Processes in Semi-Crystalline Polymers</i>	469
Recommended Reading	469

Study Questions	469
14 PROCESSING	473
Introduction	473
Extrusion	474
Single Screw Extruders: Hardware	475
Single Screw Extruders: Functionality	479
Single Screw Extruders: Applications	484
Twin Screw Extruders: Hardware	488
Twin Screw Extruders: Functions	492
Twin Screw Extruders: Applications	492
Injection Molding	493
Injection Molding: Features	496
Injection Molding: Applications	498
Injection Molding Variations	499
Hot Runners	499
Insert Molding	499
Gas-Assisted Injection Molding	500
Shear Controlled Orientation Injection Molding	501
Co-Injection Molding	502
Reaction Injection Molding	502
Compression Molding	503
Transfer Molding	504
Blow Molding	505
Injection Blow Molding	508
Stretch Blow Molding	508
Thermoforming	510
Rotational Molding	513
Recommended Reading	514
Study Questions	514
