

Michael E. McCormick

Ocean Engineering Mechanics

With Applications

CAMBRIDGE

Contents

<i>Preface</i>	page xvii
<i>Notation</i>	xix
1. Introduction	1
1.1 Generation of a Sea	1
1.2 Wind Classification and Sea State	4
1.3 Ocean Engineering Literature	4
2. Review of Hydromechanics	7
2.1 Hydrostatics	7
<i>Example 2.1: Pressure Hull Analysis</i>	9
2.2 Conservation of Mass	11
<i>Example 2.2: Flow Through a Manifold</i>	13
2.3 Rotational and Irrotational Flows	14
A. Circulation	15
B. The Velocity Potential	16
C. The Stream Function	17
D. Superposition of Irrotational Flow Patterns	19
<i>Example 2.3: Two-Dimensional Irrotational Flow about a Circular Cylinder</i>	19
2.4 Conservation of Momentum and Energy	21
<i>Example 2.4: Pressure Distribution on a Cylinder in an Irrotational Flow</i>	22
<i>Example 2.5: Incipient Cavitation on a Vertical Circular Cylinder</i>	23
2.5 Viscous Flows	24
<i>Example 2.6: Drag and Vortex Shedding for an OTEC Cold-Water Pipe</i>	27
2.6 Hydrodynamics of Submerged Bodies	30
<i>Example 2.7: Flow about a Sphere</i>	32
<i>Example 2.8: Flow about a Body of Revolution</i>	35
2.7 Scaling	37
<i>Example 2.9: Wave Power Conversion</i>	42
2.8 Closing Remarks	43

3. Linear Surface Waves	44
3.1 Wind-Wave Generation	45
3.2 Airy's Linear Wave Theory	47
<i>Example 3.1: Linearization</i>	49
3.3 Traveling or Progressive Waves	52
<i>Example 3.2: Wavelength Variation with Water Depth</i>	53
<i>Example 3.3: Wavelength Solution by Successive Approximations</i>	54
<i>Example 3.4: Deep- and Shallow-Water Wavelength Approximations</i>	55
3.4 Standing Waves	56
<i>Example 3.5: Standing Waves at a Seawall</i>	57
3.5 Water Particle Motions	59
3.6 The Wave Group	61
<i>Example 3.6: Deep-Water Wave Group</i>	63
3.7 Wave Energy and Power	64
<i>Example 3.7: Deep- and Shallow-Water Wave Energy</i>	65
<i>Example 3.8: Deep- and Shallow-Water Wave Power</i>	66
<i>Example 3.9: Wave Power Conversion</i>	67
3.8 Shoaling	68
3.9 Closing Remarks	72
4. Nonlinear Surface Waves	73
4.1 Nonlinear Wave Properties	74
4.2 Stokes' Wave Theory	76
<i>Example 4.1: Deep- and Shallow-Water Free-Surface Profiles</i>	83
<i>Example 4.2: Free-Surface Displacement in Deep Water</i>	85
4.3 Second-Order Particle Motions	86
4.4 Water Particle Convection	88
<i>Example 4.3: Deep- and Shallow-Water Particle Convection Velocities</i>	89
<i>Example 4.4: Wave-Induced Spreading of a Surface Spill</i>	91
4.5 Long Waves in Shallow Water	92
A. Cnoidal Wave Theory	92
B. Application of the Cnoidal Theory	98
<i>Example 4.5: Application of the Cnoidal Theory</i>	100
C. The Solitary Wave	101
<i>Example 4.6: Application of the Solitary Theory</i>	102
4.6 Breaking Waves	104
A. Stokes' Deep-Water Analysis	104
B. Miche's Formula: Breaking Waves in Waters of Finite Depth	106
<i>Example 4.7: Theoretical, Deep-Water Breaking Wave Profiles</i>	107
C. Breaking Solitary Waves	108
<i>Example 4.8: Breaking Height of a Shoaling Solitary Wave</i>	110
4.7 Summary	111
4.8 Closing Remarks	112
5. Random Seas	113
5.1 Introduction	113
5.2 Statistical Analysis of Measured Waves	115

<i>Example 5.1: Cumulative Probability of Occurrence</i>	117
<i>Example 5.2: Probability Density and Most-Probable Wave Height</i>	118
A. Average Wave Period and Wave Height	119
B. Mean-Square and Root-Mean-Square Wave Heights	120
C. Variance of the Wave Heights	120
<i>Example 5.3: Average Wave Period and Statistical Wave Heights</i>	120
D. Significant Wave Height and Period	120
<i>Example 5.4: Significant Wave Properties</i>	121
5.3 Continuous Probability Distributions	122
A. Average Wave Period and Wave Height	122
B. Mean-Square Wave Height	123
C. Variance of the Wave Heights	123
D. Significant Wave Height	123
5.4 Rayleigh Probability Distribution of Wave Heights	124
<i>Example 5.5: Rayleigh Probability Density and Probability Functions</i>	125
A. Average Wave Height	125
B. Probability of Exceedance	126
C. Significant Wave Height	126
D. Extreme Wave Height	127
<i>Example 5.6: Significant and Extreme Wave Heights</i>	127
5.5 Weibull Probability Distribution of Wave Heights	127
<i>Example 5.7: Weibull Probability Density and Probability Functions</i>	129
5.6 The Gaussian-Rayleigh Sea	129
<i>Example 5.8: Root-Mean-Square Wave Properties</i>	132
5.7 Wave Spectral Density	133
A. Point Spectra from Discrete Wave Data	134
<i>Example 5.9: Wave Spectral Density from Discrete Wave Data</i>	135
B. Empirical Expressions of the Point Spectral Density	136
5.8 Wind-Wave Spectra	137
A. Statistical Wave Periods	138
<i>Example 5.10: Statistical Wave Periods</i>	139
B. The Bretschneider Spectrum	140
C. The Pierson-Moskowitz Wind-Wave Spectrum	141
<i>Example 5.11: Comparison of Open-Ocean Wind-Wave Spectra</i>	143
D. The JONSWAP Spectra – the Fetch-Limited Sea	144
E. Wave Property Relationships from Empirical Wind-Wave Spectra	145
(1) Fully Developed, Open-Ocean Seas	145
(2) Fetch-Limited Seas	147
(3) Duration-Limited Seas	148
<i>Example 5.12: Fetch-Limited and Duration-Limited Seas</i>	148
F. Directional Properties of Wind-Generated Waves	150
<i>Example 5.13: Wave Power Resource Determination for a Directional Sea</i>	153
5.9 Long-Term Wave Statistics	156
5.10 Wave Spectra in Waters of Finite Depth	158
<i>Example 5.14: Bretschneider Spectra in Deep Water and Waters of Finite Depth</i>	159
5.11 Closing Remarks	160

6. Wave Modification and Transformation	161
6.1 Wave Reflection from Vertical Barriers	162
A. Perfect Reflection of Linear, Monochromatic Waves	164
<i>Example 6.1: Perfect Oblique Reflection</i>	166
B. Imperfect Reflection of Direct, Monochromatic, Linear Waves – Healy's Formula	167
<i>Example 6.2: Direct Partial Reflection of Linear Waves</i>	168
C. Reflection from a Vertical Porous Barrier	169
<i>Example 6.3: Partial Reflection from a Porous Breakwater</i>	170
6.2 Reflection from Inclined Barriers – The Long-Wave Equations	171
A. The Long-Wave Equations	172
B. Perfect Reflection from an Inclined Barrier	174
<i>Example 6.4: Totally Reflected Waves on an Inclined Barrier</i>	178
C. Nonreflecting Beaches	179
<i>Example 6.5: Shoaling on a Nonreflecting Beach</i>	180
D. Reflection from a Bed of Intermediate Slope	182
<i>Example 6.6: Convergence of the Reflection Coefficient and Phase Angle</i>	184
<i>Example 6.7: Reflection from a Bed Transition</i>	185
6.3 Refraction without Reflection – Snell's Law	185
<i>Example 6.8: Shoaling and Refraction on a Straight, Parallel Contoured Beach</i>	187
6.4 Diffraction	188
A. Huygens' Principle	189
B. Basic Equations and Boundary Conditions in the Analysis of Diffraction	190
C. Modified Huygens-Fresnel Principle	192
D. Diffraction Analyses of Water Waves	198
(1) Diffraction of Waves Directly Incident upon a Semi-Infinite Breakwater	198
<i>Example 6.9: Diffraction Coefficients along the Leeward Sides of Rigid and Compliant Breakwaters</i>	203
(2) Diffraction of Waves Obliquely Incident upon a Semi-Infinite Breakwater	204
<i>Example 6.10: Diffraction Coefficients along the Leeward Sides of a Rigid Breakwater</i>	205
(3) Diffraction of Waves by a System of Detached Breakwaters	207
<i>Example 6.11: Waves Directly Incident on a Gap between Semi-Infinite Breakwaters</i>	211
6.5 The Mild-Slope Equation	212
A. Derivation of the Mild-Slope Equation	213
B. Application to a Straight and Parallel Contoured Bed	216
<i>Example 6.12: Application of the Mild Slope to Pure Shoaling</i>	221
6.6 Closing Remarks	223

7. Waves in the Coastal Zone	224
7.1 Coastal Zone Phenomena	225
7.2 Empirical Analyses of Breaking Waves on Beaches	226
<i>Example 7.1: Breaking Wave Properties over a Flat, Horizontal Bed</i>	229
<i>Example 7.2: Breaking Wave Properties on a Beach of Uniform Slope – Empirical Equations</i>	230
7.3 Surf Similarity	231
A. Breaking Waves	232
B. Wave Reflection	233
C. Runup	233
<i>Example 7.3: Breaking Wave Properties on a Beach of Uniform Slope – Surf Similarity</i>	234
7.4 Surf Zone Hydromechanics – Radiation Stress	234
A. Radiation Stress	235
(1) Radiation Stress in the Direction of Wave Travel	235
(2) Radiation Stress Transverse to the Wave Travel	237
(3) Radiation Stress Matrix	237
<i>Example 7.4: Comparison of Radiation Stress in Deep and Shallow Waters</i>	238
(4) Transformation of the Radiation Stress Matrix	238
<i>Example 7.5: Normal and Diagonal Radiation Stress Components for a Breaking Wave</i>	240
B. Wave Set-Up and Set-Down	240
<i>Example 7.6: Comparison of Theoretical and Experimental Wave Height, Water Depth, and Set-Down at a Break and Runup</i>	245
<i>Example 7.7: Set-Up in the Surf Zone</i>	246
C. Longshore Velocity	246
(1) Negligible Lateral Mixing	251
(2) Negligible Bed Friction	251
(3) Combined Bed Friction and Lateral Mixing Effects	251
<i>Example 7.8: Maximum Longshore Velocity</i>	254
D. Average Longshore Volume Flow Rate	255
<i>Example 7.9: Longshore Volume Transport Rate</i>	256
<i>Example 7.10: Longshore Sediment Transport Rate</i>	257
7.5 Closing Remarks	257
8. Coastal Engineering Considerations	258
8.1 Shore Protection Methods	258
<i>Example 8.1: Planning a Groin Field</i>	261
8.2 Decision Process in Coastal Protection	262
<i>Example 8.2: Decision Tree for Shoreline Erosion Abatement</i>	262
8.3 Rubble-Mound Structures	263
A. Stone Selection for Rubble-Mound Breakwaters	265
(1) Armor Stone	265
(2) Shield Stone	265
(3) Foundation Stone	265
(4) Toe-Berm Stone	266
<i>Example 8.3: Preliminary Design of a Rubble-Mound Breakwater</i>	267

8.4 Reliability of a Rubble-Mound Structure	268
<i>Example 8.4: Reliability of a Rubble-Mound Breakwater</i>	269
<i>Example 8.5: Weibull Reliability of a Rubble-Mound Breakwater</i>	271
8.5 Closing Remarks	272
9. Wave-Induced Forces and Moments on Fixed Bodies	273
9.1 Wave-Induced Forces and Moments on a Seawall	274
A. Pressure, Force, and Moment Resulting from Direct Reflection of Linear Waves	274
<i>Example 9.1: Wave Force and Moment on a Seawall Due to Standing Linear Waves</i>	276
B. Pressure and Force Resulting from Direct Reflection of a Solitary Wave	276
<i>Example 9.2: Pressure Distribution on a Seawall beneath a Solitary Wave</i>	279
9.2 Wave-Induced Forces on Submerged and Surface-Piercing Bodies	280
A. The Concept of Added Mass	280
(1) Cylinders with Circular Cross-Sections	282
(2) Cylinders with Noncircular Cross-Sections – Lewis Forms	283
<i>Example 9.3: Two Lewis Forms</i>	286
<i>Example 9.4: Added Mass of a Noncircular Cylinder</i>	288
B. Natures of Wave-Induced Forces on Circular Cylinders	289
C. Wave-Induced Drag Forces	290
D. The Morison Equation	292
<i>Example 9.5: Force and Moment on a Vertical Circular Pile in Shallow Water</i>	294
E. Circular Cylinders of Large Diameter – The MacCamy-Fuchs Analysis	297
<i>Example 9.6: Force and Moment on a Cofferdam in Shallow-Water Linear Waves</i>	303
F. Mass Coefficient for a Circular Cylinder	304
G. Diffraction Force and Moment on a Rectangular Cylinder	305
<i>Example 9.7: Force and Moment on a Square Cylinder in Shallow-Water Linear Waves</i>	307
H. Truncated Circular Cylinder of Large Diameter	307
(1) Approximations of the Horizontal Force and Resulting Moment	308
(2) Approximations of the Vertical Force and Resulting Moment	309
<i>Example 9.8: Wave-Induced Forces on a Spar Work Platform</i>	311
(3) Garrett's Analysis	312
(4) Results of the Approximate and Garrett Forces	322
I. Scattering Effects of Large-Diameter Leg Arrays	324
<i>Example 9.9: Wave-Induced Forces on an In-Line, Two-Leg Platform</i>	332
9.3 Wave-Induced Forces and Moments on Bodies in Random Seas	334
A. Spectral Nature of Wave-Induced Viscous-Pressure and Inertia Forces	336

<i>Example 9.10: Predicted and Measured Wave and Force Spectra on a Circular Pile</i>	338
B. Probabilistic Nature of the Viscous-Pressure and Inertia Wave Forces	338
<i>Example 9.11: Probabilities of Occurrence for the Maximum Drag Force on a Circular Pile</i>	342
<i>Example 9.12: Most-Probable Maximum Force for the 100-Year Storm</i>	343
C. Random Nature of Diffraction Forces on a Fixed, Vertical Circular Cylinder	345
<i>Example 9.13: Diffraction Forces on a Monolithic Gravity Structure</i>	346
<i>Example 9.14: Extreme Diffraction Forces on a Monolithic Gravity Structure</i>	348
9.4 Closing Remarks	349
10. Introduction to Wave-Structure Interaction	350
10.1 Basic Concepts	350
A. Equations of Motion	351
B. Added Mass and Radiation Damping	352
C. Equivalent Viscous Damping Coefficient	354
D. Steady-State Solution of the Heaving Equation	356
<i>Example 10.1: Heaving Motion of a Can Buoy</i>	356
E. Determination of Added Mass and Resonant Damping Coefficients in Calm Water	358
<i>Example 10.2: Experimental Determination of Heaving Added Mass and Damping Logarithmic Decrement Method</i>	360
F. Bandwidth Determination of Damping in Wave-Induced Heaving Motions	361
<i>Example 10.3: Experimental Determination of Damping in Wave-Induced Heaving-Half-Power Bandwidth Method</i>	363
<i>Example 10.4: Experimental Determination of Component Damping Coefficients</i>	364
10.2 Power Take-Off	365
<i>Example 10.5: Power Take-Off of a Heaving Circular Cylinder at Resonance</i>	366
10.3 Random Motions	368
<i>Example 10.6: Root-Mean-Square Heaving Response of Underdamped Motions of a Can Buoy in a Random Sea</i>	371
<i>Example 10.7: Root-Mean-Square and Extreme Heaving Amplitudes of Highly Damped Motions of a Can Buoy in a Random Sea</i>	372
10.4 Closing Remarks	375
11. Wave-Induced Motions of Floating Bodies	376
11.1 Hydrostatic Considerations – Initial Stability	377
<i>Example 11.1: Roll Stability of a Can Buoy</i>	380
11.2 Floating Body Motions	380
A. Boundary Condition on the Body	381
<i>Example 11.2: Body Condition for a Semi-Submerged, Heaving Sphere</i>	382
B. Heaving and Pitching Equations of Motion	383
C. Introduction to Strip Theory	384

(1) Hydrostatic Restoring Force and Moment	386
(2) Viscous Damping Force and Moment	386
(3) Hydrodynamic Forces and Moments	387
D. Coupled Heaving and Pitching Equations of Motion	390
11.3 Two-Dimensional Hydrodynamics – Vertical Body Motions	392
A. Strip Geometries – Lewis Forms	393
Example 11.3: Lewis Ship-Shape Section (Strip)	396
B. Velocity Potentials	398
(1) Incident Wave Potential	398
(2) Vertical Motions of Lewis Forms – Velocity Potential and Stream Function	399
Example 11.4: Velocity Potential and Stream Function for a Heaving Circular Strip	401
(3) Velocity Potential for the Wave-Body Interaction	402
(4) Total Velocity Potential	402
C. Hydrodynamic Pressures and Forces on the Strip in Deep Water	402
(1) Wave-Induced Pressure and Force	403
Example 11.5: Wave-Induced Vertical Forces on Two Strip Geometries	405
(2) Motion-Induced Pressure and Force	407
Example 11.6: Spatial Variation of a Semicircular Sectional Area	408
Example 11.7: Motion-Induced Vertical Forces on Two Strip Geometries	410
(3) Wave-Body Interaction Pressure and Force on a Strip	411
Example 11.8: Wave-Body Interaction Forces on Two Strip Geometries	413
D. Radiation Damping	415
Example 11.9: Radiation Damping Coefficients Using the YFF Formula	416
Example 11.10: Radiation Damping Coefficient Using the Tasai Formula	417
11.4 Coupled Heaving and Pitching Motions Based on Strip Theory	419
Example 11.11: Transverse Stability and Planar Motions of a Barge in Linear Waves	422
11.5 Experimental and Theoretical Hydrodynamic Coefficient Data	431
A. Modification of the Lewis Added-Mass Coefficients to Include Frequency Dependence	431
B. Vertical Motions of a Rectangular Section	432
C. Vertical Motions of a Semicircular Section	433
11.6 Singularity Method of Determining the Hydrodynamic Coefficients	434
A. The Source Pair	436
B. Distributed Sources – Rectangular Strip	438
(1) Alternative Infinite-Frequency Added Mass of a Heaving Rectangular Strip	440
Example 11.12: Alternative Expression for the Added Mass for a Heaving Rectangular Strip	442
(2) Radiation Damping of a Heaving Rectangular Strip	444
Example 11.13: Radiation Damping Coefficient for a Heaving Rectangular Strip	445
11.7 Two-Dimensional Haskind Force Relationships	446

A. Newman's Formulation	446
B. Wave-Induced Vertical Force on Rectangular Section	451
<i>Example 11.14: Wave-Induced Forces on a Heaving Rectangular Strip</i>	451
11.8 Closing Remarks	452
12. Wave-Induced Motions of Compliant Structures	453
12.1 Compliant Structures	453
12.2 Basic Mooring Configurations	455
A. Taut Moorings	455
<i>Example 12.1: Tension in a SeaStar Tether</i>	457
B. Slack Moorings	458
<i>Example 12.2: Effective Spring Constant for Slack Line</i>	461
<i>Example 12.3: Effective Spring Constant for a Barge Moored with Four Slack Lines</i>	464
12.3 Soil-Structure Interactions	465
A. Embedded Structures	468
(1) Bending Deflection in the Plastic Zone	470
(2) Bending Deflection in the Elastic Zone	471
(3) Complete Bending Solution	471
(4) Comparison of Analysis and Data	473
B. Spread Footings – Gravity Structures	474
12.4 Motions of a Tension-Leg Platform (TLP)	476
A. Tethers	478
<i>Example 12.4: Effective Spring Constants for a TLP</i>	479
B. Soil Reactions	479
C. Wave-Induced Forces	480
(1) Drag Force	481
(2) Diffraction Force	482
D. Hydrodynamic Coefficients for a Spar	483
(1) Heaving Added Mass and Radiation Damping	484
<i>Example 12.5: Added-Mass and Radiation-Damping Coefficients for a Heaving Vertical Cylindrical Hull in Water of Finite Depth</i>	486
(2) Surging Added Mass and Radiation Damping	486
E. Surging Motions in Regular Seas	489
<i>Example 12.6: Surging Motions of a TLP</i>	491
F. Surging Motions in Random Seas	495
<i>Example 12.7: Root-Mean-Square Surge Response of Motions of a TLP</i>	496
<i>Example 12.8: Spectral Density of the Surge Response of Motions of a TLP</i>	497
12.5 Motions of an Articulated-Leg Platform (ALP)	498
<i>Example 12.9: Wave-Induced Motions of an ALP</i>	506
12.6 Motions of Flexible Towers	509
A. Effective Spring Constants	511
B. Analysis of the Motions of a Flexible Offshore Tower (FOT)	514
(1) Swaying Motions of a FOT	515
<i>Example 12.10: First Modal Swaying Frequency of a FOT</i>	517
<i>Example 12.11: First Modal Swaying Frequency of a Three-Panel FOT</i>	518

(2) Bending Motions of a TRAP	519
<i>Example 12.12: Deflection of a TRAP in a Design Sea</i>	525
12.7 Closing Remarks	528
Appendices	529
A. Bessel Functions	529
B. Runge-Kutta Solution of Differential Equations	530
C. Green's Theorem	532
C1. Three-Dimensional Green's Theorem	532
C2. Two-Dimensional Green's Theorem	533
C3. Green's Theorem Applied to an Irrotational Flow	533
D. Green's Function	534
D1. Three-Dimensional Green's Function	534
(1) Three-Dimensional Flow Source	534
(2) Three-Dimensional Wave Source	536
D2. Two-Dimensional Green's Function	536
E. Solutions of Laplace's Equation	537
E1. Cartesian Coordinates	538
E2. Cylindrical Coordinates	539
F. Fourier Transforms	540
G. Lewis Sharp-Bilge Analysis	541
H. Infinite-Frequency Added-Mass Expressions	544
H1. Two-Dimensional Added Mass	544
(1) Motions in an Infinite Liquid	544
(2) Motions of a Rectangular Section in Liquid with a Free Surface	546
H2. Three-Dimensional Added Mass	547
(1) Flat Plate Motions in an Infinite Liquid	547
(2) Motions of a Sphere in an Infinite Liquid and beneath a Free Surface	547
H3. Frequency-Dependent Added Mass	548
