

JAAN KIUSALAAS

Numerical Methods in Engineering with Python

SECOND EDITION

Contents

Preface to the First Edition.....	viii
Preface to the Second Edition	x
1 Introduction to Python	1
1.1 General Information	1
1.2 Core Python	3
1.3 Functions and Modules	15
1.4 Mathematics Modules	17
1.5 numpy Module	18
1.6 Scoping of Variables	24
1.7 Writing and Running Programs	25
2 Systems of Linear Algebraic Equations	27
2.1 Introduction	27
2.2 Gauss Elimination Method	33
2.3 LU Decomposition Methods	40
<i>Problem Set 2.1</i>	51
2.4 Symmetric and Banded Coefficient Matrices	54
2.5 Pivoting	64
<i>Problem Set 2.2</i>	73
*2.6 Matrix Inversion	79
*2.7 Iterative Methods	82
<i>Problem Set 2.3</i>	93
*2.8 Other Methods	97
3 Interpolation and Curve Fitting	99
3.1 Introduction	99
3.2 Polynomial Interpolation	99
3.3 Interpolation with Cubic Spline	114
<i>Problem Set 3.1</i>	121
3.4 Least-Squares Fit	124
<i>Problem Set 3.2</i>	135
4 Roots of Equations	139
4.1 Introduction	139

4.2 Incremental Search Method.....	140
4.3 Method of Bisection.....	142
4.4 Methods Based on Linear Interpolation.....	145
4.5 Newton-Raphson Method.....	150
4.6 Systems of Equations.....	155
<i>Problem Set 4.1</i>	160
*4.7 Zeroes of Polynomials.....	166
<i>Problem Set 4.2</i>	174
5 Numerical Differentiation	177
5.1 Introduction.....	177
5.2 Finite Difference Approximations.....	177
5.3 Richardson Extrapolation.....	182
5.4 Derivatives by Interpolation.....	185
<i>Problem Set 5.1</i>	189
6 Numerical Integration	193
6.1 Introduction.....	193
6.2 Newton-Cotes Formulas.....	194
6.3 Romberg Integration.....	202
<i>Problem Set 6.1</i>	207
6.4 Gaussian Integration.....	211
<i>Problem Set 6.2</i>	225
*6.5 Multiple Integrals.....	227
<i>Problem Set 6.3</i>	239
7 Initial Value Problems	243
7.1 Introduction.....	243
7.2 Taylor Series Method.....	244
7.3 Runge-Kutta Methods.....	249
<i>Problem Set 7.1</i>	260
7.4 Stability and Stiffness.....	266
7.5 Adaptive Runge-Kutta Method.....	269
7.6 Bulirsch-Stoer Method.....	277
<i>Problem Set 7.2</i>	284
7.7 Other Methods.....	289
8 Two-Point Boundary Value Problems	290
8.1 Introduction.....	290
8.2 Shooting Method.....	291
<i>Problem Set 8.1</i>	301
8.3 Finite Difference Method.....	305
<i>Problem Set 8.2</i>	314
9 Symmetric Matrix Eigenvalue Problems	319
9.1 Introduction.....	319
9.2 Jacobi Method.....	321
9.3 Power and Inverse Power Methods.....	337
<i>Problem Set 9.1</i>	345
9.4 Householder Reduction to Tridiagonal Form.....	351
9.5 Eigenvalues of Symmetric Tridiagonal Matrices.....	358

<i>Problem Set 9.2</i>	367
9.6 Other Methods	373
10 Introduction to Optimization	374
10.1 Introduction	374
10.2 Minimization along a Line	376
10.3 Powell's Method	382
10.4 Downhill Simplex Method	392
<i>Problem Set 10.1</i>	399
10.5 Other Methods	406
A1 Taylor Series	407
A2 Matrix Algebra	410
 List of Program Modules (by Chapter)	416
Index	419
