

Handbook of Environmental Degradation of Materials

Second Edition

Edited by
Myer Kutz

Contents

Preface to the Second Edition	xv
Preface to the First Edition	xvii
Part One Analysis	1
1 Analysis of Failures of Metallic Materials Due to Environmental Factors	3
<i>K.E. Perumal</i>	
1.1 Introduction	3
1.2 Classification of Failures	3
1.3 Analysis of Failures	5
1.4 Case Histories of Environmental-Related Failures	6
1.5 Conclusions	31
References	32
2 Laboratory Assessment of Corrosion	33
<i>C.S. Brossia</i>	
2.1 Introduction	33
2.2 Immersion Tests	36
2.3 Cabinet Tests	47
2.4 Electrochemical Tests	50
2.5 Conclusions	60
Bibliography	61
References	61
3 Lifetime Predictions of Plastics	63
<i>James A. Harvey</i>	
3.1 Introduction	63
3.2 Master Curves	64
3.3 Chemical Kinetics	70
3.4 Thermal Decomposition Experiments	74
3.5 Mechanical Experiments	77
3.6 Miscellaneous Experimentation	79
3.7 Summary	81
References	82

Part Two	Types of Degradation	85
4	Electrochemical Corrosion	87
	<i>R.A. Buchanan and E.E. Stansbury</i>	
4.1	Introduction	87
4.2	Electrochemical Thermodynamics	88
4.3	Electrochemical Kinetics and Corrosion Processes	106
4.4	Experimental Polarization Curves	113
4.5	Examples of Electrochemical Corrosion Measurements and Characterizations	117
4.6	Summary	124
	References	125
5	High Temperature Oxidation	127
	<i>A.S. Khanna</i>	
5.1	Introduction	127
5.2	Criteria of Metal Oxidation	128
5.3	Kinetics of Oxidation	129
5.4	Techniques Involved in Measuring Oxidation Behavior	133
5.5	Measurement of Oxidation Kinetics	133
5.6	Identification and Characterization of Scales	134
5.7	Wagner Hauffe Rules	137
5.8	Marker Technique	138
5.9	Oxygen Tracer Technique	139
5.10	Initial Oxidation or Thin Layer Oxidation	140
5.11	Oxidation of Pure Metals	146
5.12	Oxidation of Alloys	151
5.13	Influence of Alloy Addition on Oxidation Behavior	152
5.14	Oxidation Behavior of Some Commercial Alloys	159
5.15	Oxidation in Mixed Gas Environments	166
5.16	Phase Stability Diagrams	170
5.17	Scaling of Alloys in SO ₂ Containing Atmospheres	173
5.18	Oxidation of Fe-Cr-Al and Ni-Cr-Al Alloys in SO ₂ and O ₂ Environments	178
5.19	Hot Corrosion	179
5.20	Oxide Spallation	184
5.21	The Pilling Bedworth Ratio	187
5.22	Stresses Developed During Thermal Cycling Conditions	187
5.23	Examples of High Temperature Corrosion in Various Industries	189
5.24	Petroleum Refining and Petrochemical Processes	194
	References	194
6	Chemical and Physical Aging of Plastics	195
	<i>James A. Harvey</i>	
6.1	Introduction	195
6.2	Chemical Aging	195

6.3	Environmental Stress Cracking	196
6.4	Physical Aging	197
6.5	Summary	209
	References	210
7	Thermal Degradation of Polymer and Polymer Composites	213
	<i>Sudip Ray and Ralph P. Cooney</i>	
7.1	Introduction	213
7.2	General Aspects	214
7.3	Thermal Degradation of Various Polymers	219
7.4	Thermal Degradation of Polymer Composites	231
7.5	Preventing Degradation	236
7.6	Thermal Degradation of Waste Polymers	236
7.7	Concluding Remarks	237
	Acknowledgments	238
	References	238
8	Biofouling and Prevention: Corrosion, Biodeterioration and Biodegradation of Materials	243
	<i>Ji-Dong Gu</i>	
8.1	Introduction	243
8.2	Bacterial Adhesion on Surfaces	244
8.3	Mediators of Invertebrate Settlement	246
8.4	An Example With Zebra Mussels	250
8.5	Corrosion of Metals	252
8.6	Biodeterioration of Polymeric Materials	260
8.7	Summary	266
	Acknowledgements	266
	References	266
9	Material Flammability	283
	<i>M.L. Janssens</i>	
9.1	Introduction	283
9.2	Thermal Degradation of Materials	284
9.3	Elements of Material Flammability	285
9.4	Tests to Assess Material Flammability	287
9.5	Methods to Improve Material Flammability	297
9.6	Material Property Data	299
9.7	Computer Modeling of Material Degradation in Fires	305
	References	305
10	Flame Retardants	309
	<i>Ann Innes and Jim Innes</i>	
10.1	Introduction—What Is an FR?	310
10.2	Fire Statistics—Why Do We Use FRs?	311
10.3	FR Applications—Where Are FRs Used?	312

10.4	Flammability Standards and Test Methods—How Is FR Effectiveness Measured?	313
10.5	UL94 (Issued by Underwriters Laboratories)	314
10.6	Limiting Oxygen Index or LOI (ASTM D2863)	314
10.7	Steiner Tunnel (ASTM E84)	314
10.8	Vertical Tray Cable Test (IEEE 383)	314
10.9	Smoke Measurement—What Is Smoke and How Is It Measured?	315
10.10	FR Standards Issuing Organizations—Where Do All These Tests Come From?	315
10.11	Market Drivers—What Else Should Be Known Before Formulating an FR Product?	316
10.12	What Is Wrong with Halogen FRs?	317
10.13	FRs—What Compounds Are Used?	317
10.14	FR101—What Are the Major FR Technologies and How Do They Work?	318
10.15	The Three Major FR Technologies	319
10.16	Halogen FRs—Selected Products	321
10.17	Halogen FR Synergists	324
10.18	Halogen FRs and REACH	325
10.19	Metal Hydrate FRs	325
10.20	Phosphorus FRs	326
10.21	Other FRs	328
10.22	Smoke Suppressants	329
10.23	Nanotechnology and Flame Retardance	330
10.24	Conclusion	333
	References	334
11	Environmental Degradation of Reinforced Concrete	337
	<i>Neal Berke</i>	
11.1	Introduction	337
11.2	Concrete Properties Affecting Chloride Ingress and Threshold Values	339
11.3	Corrosion Mechanisms of Steel in Concrete	340
11.4	Mechanisms of Corrosion Protection Systems	343
11.5	Reducing Chloride Ingress	344
11.6	Corrosion Inhibitors	345
11.7	Rebar Coatings	347
11.8	Stainless Steel	347
11.9	Cathodic Protection	347
11.10	Life-Cycle Modeling	348
11.11	Environment and Geometry	348
11.12	Summary	352
	References	352

Part Three	Protective Measures	357
12	Cathodic Protection	359
	<i>Richard W. Evitts</i>	
12.1	Introduction	359
12.2	Corrosion Fundamentals	359
12.3	Galvanic Cathodic Protection Systems	362
12.4	Impressed Cathodic Protection Systems	372
12.5	Ground Bed Spacing	374
	References	380
13	Thermal and Fire Protective Fabric Systems	381
	<i>Hechmi Hamouda</i>	
13.1	Introduction	381
13.2	General Concepts	382
13.3	T&FFS Materials	383
13.4	Exposure Process	386
13.5	Testing Standards and Protection Assessment	388
13.6	Sensing Devices	395
13.7	Skin Burn Damage Evaluation	399
13.8	Other Modeling Components	402
13.9	Conclusion	405
	References	405
14	Protection of Wood-Based Materials	407
	<i>Jeffrey J. Morrell</i>	
14.1	Introduction	407
14.2	Abiotic Agents	408
14.3	Biotic Agents	409
14.4	Decay Organisms	411
14.5	Insects	415
14.6	Marine Borers	418
14.7	Magnitude of Wood Deterioration Losses	419
14.8	Wood Protection	419
14.9	Treatment Methods	423
14.10	Treatment Standards	428
14.11	New Treatment Processes	429
14.12	Environmental Considerations	430
14.13	Preservatives	430
14.14	Remedial Treatments	436
14.15	Nonbiocidal Barriers	437
14.16	The Future	438
	References	438

Part Four	Surface Engineering	441
15	The Intersection of Design, Manufacturing, and Surface Engineering	443
	<i>Gary P. Halada and Clive R. Clayton</i>	
15.1	Introduction	443
15.2	Surface Engineering Design Needs	444
15.3	Sensing of Degradation Effects on Surface Chemistry	450
15.4	Traditional and Emerging Surface Engineering Technologies	456
15.5	The Role of Computer Modeling	471
15.6	Summary	472
	References	473
16	Environmental Degradation of Engineered Nanomaterials: Impact on Materials Design and Use	481
	<i>Gary P. Halada and Alexander Orlov</i>	
16.1	Current Uses of Engineered Nanomaterials	481
16.2	Environmental Degradation of Metallic and Ceramic Nanoparticles	482
16.3	Environmental Degradation of Carbon Nanotubes	487
16.4	Environmental Degradation of Polymeric Nanostructures	489
16.5	Environmental Degradation of Nanostructured Surfaces	489
16.6	Environmental Degradation of Nanocomposites	490
16.7	Impact on Health and Environment	493
16.8	Impact of Consideration of Environmental Transformation on Design and Use of Engineered Nanomaterials: Guidelines	495
	References	497
17	Protective Coatings for Aluminum Alloys	503
	<i>Thomas P. Schuman</i>	
17.1	Introduction	503
17.2	Selecting the Alloy	504
17.3	Coating System Engineering	505
17.4	Metal Surface Pretreatment	508
17.5	Conversion Coatings	518
17.6	Primers	528
17.7	Topcoating	532
17.8	Unicoatings	533
17.9	Summary	533
	References	534
18	Corrosion Resistant Coatings and Paints	539
	<i>R.G. Buchheit</i>	
18.1	Scope	539
18.2	Corrosion Protection by Coatings and Paints	540

18.3	Engineering Alloys and Their Need for Corrosion Resistant Coatings	546
18.4	Characteristics and Uses of Corrosion Resistant Paint and Coatings	547
18.5	Application Methods and Surface Preparation	553
18.6	Factors Affecting Coating Degradation	554
18.7	Corrosion Under Coatings	555
18.8	Coating Degradation and Evaluation Methods	558
18.9	Key Applications	561
18.10	Environmental Hazards	565
	References	566
19	Thermal Spray Coatings	569
	<i>Mitchell R. Dorfman</i>	
19.1	Introduction	569
19.2	Thermal Spray Basics and Processes	570
19.3	Materials Consumables	576
19.4	Manufacturing Processes	579
19.5	The Function of a Coating and Its Applications	581
19.6	General Applications	587
19.7	Miscellaneous Applications	594
19.8	Coating Selection	595
19.9	Summary	595
	References	596
20	Paint Weathering Tests	597
	<i>Mark E. Nichols</i>	
20.1	Introduction	597
20.2	Degradation Processes	597
20.3	Outdoor Exposure	601
20.4	Artificial Accelerated Weathering Tests	606
20.5	Test Cycles	613
20.6	Postexposure Testing	615
20.7	Nontraditional Material Evaluations	617
	Further Reading	618
	References	618
21	Polymer Coatings for Concrete Surfaces: Testing and Modeling	621
	<i>Cumaraswamy Vipulanandan and Jia Liu</i>	
21.1	Introduction	621
21.2	Materials	623
21.3	Testing Programs and Results	623
21.4	Modeling Liquid Transport into Coated Concrete	640
21.5	Conclusions	652
21.6	Acknowledgment	652
	References	653

22	The Role of Intrinsic Defects in the Protective Behavior of Organic Coatings	655
	<i>S.R. Taylor</i>	
22.1	Introduction	655
22.2	Types of Coating Defects	656
22.3	Electrochemical Methods for the Local Characterization of Coatings	658
22.4	Findings Through the Use of Leim and Leis	659
22.5	The Use of Molecular Probes	668
	Acknowledgments	671
	References	671
23	Polymer Stabilization	673
	<i>Pieter Gijsman</i>	
23.1	Introduction	673
23.2	Degradation Chemistry	674
23.3	Stabilizers	678
23.4	Performance of Stabilizers	688
23.5	Other Factors Determining the Choice of Stabilizers	692
	References	703
	Part Five Industrial Applications	715
24	Degradation of Spacecraft Materials	717
	<i>Joyce Dever, Bruce Banks, Kim de Groh and Sharon Miller</i>	
24.1	Introduction	717
24.2	Atomic Oxygen Effects	719
24.3	Contamination Effects	735
24.4	Space Radiation Effects	738
24.5	Thermal and Thermal Cycling Effects	750
24.6	Micrometeoroid and Orbital Debris Effects	758
24.7	Concluding Remarks	762
	References	763
25	Cathodic Protection of Pipelines	771
	<i>Branko N. Popov and Swaminatha P. Kumaraguru</i>	
25.1	Fundamentals	771
25.2	Cathodic Protection Criteria	776
25.3	Field Data and Design Aspects	778
25.4	Monitoring Methods	783
25.5	Design of Cathodic Protection Systems	786
25.6	Computer-Aided Design of Cathodic Protection	794
	References	794

26	Tanker Corrosion	799
	<i>Ge Wang, John S. Spencer, Sittha Saidarasamoot, Swieng Thuanboon, David L. Olson and Brajendra Mishra</i>	
26.1	Introduction	799
26.2	Tanker Structures	805
26.3	Corrosion Mechanisms in Tankers	809
26.4	Corrosion Statistics	814
26.5	Corrosion Risk to Structural Integrity	817
26.6	Measurement and Monitoring of Corrosion Degradation	819
26.7	Prevention and Mitigation	820
26.8	Related Requirements in Marine Industries	823
	References	830
27	Barrier Packaging Materials	833
	<i>Mikael S. Hedenqvist</i>	
27.1	Introduction	833
27.2	Factors Determining the Barrier Properties of Polymers	834
27.3	Food Packaging	856
	Acknowledgements	860
	References	860
28	Corrosion Prevention and Control of Chemical Processing Equipment	863
	<i>William Stephen Tait</i>	
28.1	Introduction	863
28.2	Different Types of Corrosion	864
28.3	Preventing and Controlling Corrosion	866
28.4	Selecting Corrosion Resistant Materials for Chemical Processing Equipment	878
28.5	Corrosion Prevention and Control Through Corrosion Testing	881
28.6	Chapter Summary	885
28.7	Sources of Further Information	885
	References	885
	Index	887
