Cambridge - IISc Series

THIRD EDITION

Fluid Mechanics

Foundations and Applications of Mechanics

VOLUME II

C. S. Jog

CAMBRIDGE

IISc Press

Contents

List of Figures *viii*
List of Tables *xv*
Preface *xvii*
Notation *xix*

1 Kinematics and Governing Equations 1
1.1 Tensor Identities 1
1.2 Kinematics 2
1.2.1 Lagrangian and Eulerian descriptions 2
1.2.2 Flow lines 5
1.2.3 Analysis of deformation 5
1.2.4 Vortex lines and circulation 8
1.3 Governing Equations 9
1.3.1 Conservation of mass 11
1.3.2 Balance of linear momentum 12
1.3.3 Balance of angular momentum 14
1.3.4 Principle of material frame-indifference 15
1.3.5 Definition of a fluid 21
1.3.6 The first law of thermodynamics 23
1.3.7 The second law of thermodynamics 26
1.3.8 The Navier–Stokes and energy equations 36
1.3.9 Summary of the governing equations for a Newtonian fluid 37
1.4 Nature of the Governing Equations 38
1.5 Boundary Conditions on Velocity and Temperature 39
1.5.1 Kinematic boundary conditions on the velocity field 40
1.5.2 Dynamical boundary conditions at a fluid-rigid solid interface 41
1.5.3 Dynamical boundary conditions at a fluid–fluid interface 42
1.5.4 Boundary conditions on temperature 52
1.6 Dimensionless Parameters 53
1.7 Special Forms of the Governing Equations 55
1.7.1 First integral of the momentum equation 56
1.7.2 Bernoulli's equation 65
1.7.3 Kelvin's circulation theorem 70
1.7.4 Helmholtz's vorticity equation 72

1.8 Example Applications 73
1.8.1 Flow past a cylinder 73
1.8.2 von Karman momentum integral 76
1.8.3 Flow of inviscid fluid over a bump 78
1.8.4 Jet impacting on a moving plate 83
1.8.5 Rocket propulsion 87
1.8.6 Impulse turbine 88
1.8.7 Slip-stream analysis of a wind turbine 92
1.8.8 Flow through a pipe network 95

2 Hydrostatics 103
2.1 Force on a Plane Surface 104
2.2 Forces on a Curved Surface 106
2.3 Example Applications 110

3 Ideal Fluid Flow 119
3.1 Simplification of the Euler Equations for Potential Flow 119
3.2 Two-Dimensional Potential Flow 120
3.3 Circulation and Volume Flow Rate 125
3.4 Elementary Complex Potentials 126
3.5 Rankine Oval 133
3.6 Uniform Flow Past a Cylinder 135
3.7 Uniform Flow Past an Elliptic Cylinder/Motion of an Elliptic Cylinder in a Stationary Fluid 138
3.8 Method of Images 139
3.9 Blasius Force Theorems 142
3.10 Flow Past a Cylinder with Point Vortex at the Origin 148
3.11 Circle Theorem 151
3.12 Conformal Mapping 154
3.13 Free-Streamline Theory 162
3.14 Flow Inside/Outside a Rotating Prismatic Tube 166
3.15 Two-Dimensional Flow with Vorticity 171
3.16 Three-Dimensional Potential Flow 173
3.17 Elementary Potentials 178
3.18 Force on a Rigid Body in Potential Flow 181
3.19 Flow Around a Sphere 182
3.20 Flow Around a Prolate Spheroid 184
3.21 Kinetic Energy of a Moving Fluid 185
3.22 Motion of a Sphere Through a Stationary Fluid 187
3.23 Motion of a Bubble through a Stationary Fluid 189

4 Surface Waves 201
4.1 Governing Equations for Surface Waves 201
4.2 Small Amplitude Two-Dimensional Waves 203
4.3 Small-Amplitude Traveling Waves 205
4.3.1 Particle paths for traveling waves 207
4.3.2 Stream function for traveling waves 208
4.4 The Dispersion Relation 209
4.5 Standing Waves 210
4.6 Traveling Waves at the Interface of Two Liquids 211
4.7 Group Velocity 214
4.8 Shallow-Water Finite Waves 217
4.8.1 The wave equation 219
4.8.2 Finite-amplitude waves: The method of characteristics 223
4.9 The Dam Breaking Problem 227
4.9.1 The dam break problem without tailwater 227
4.9.2 Shock waves 230
4.9.3 Dam break problem with tailwater 234
4.10 Lagrangian formulation 236

5 Exact Solutions to Flow Problems of an Incompressible Viscous Fluid 242
5.1 Governing Equations 243
5.2 Plane Steady Unidirectional Flows 246
5.3 Poiseuille Flow 250
5.4 Stagnation-Point Flow 267
5.5 Flow in a Converging or Diverging Channel 270
5.6 Flow between Rotating Cylinders 273
5.7 Fluid in a Rotating Body 276
5.8 Flow over an Infinite Rotating Disc 277
5.9 Unsteady Flow Problems 278
5.9.1 Radial growth or collapse of a spherical bubble 278
5.9.2 Stokes' problems 279
5.9.3 Generalized Couette (or generalized Stokes) flow in a channel 284
5.9.4 Unidirectional flow through a circular pipe 290
5.9.5 Transient flow inside or outside a rotating cylinder 299
5.9.6 Transient flow in an annular duct 302
5.9.7 Transient flow in a duct of rectangular cross section 305
5.9.8 Squeeze-film flows 306
5.10 Wind Driven Ocean Currents: The Ekman Layer 313

6 Laminar Boundary Layer Theory 326
6.1 Governing Equations 327

6.2 Blasius Solution 330
6.3 Falkner–Skan Solution 334
6.4 Displacement and Momentum Thickness 338
6.5 Approximate Techniques: The von Karman Momentum Integral 339
6.6 Thermal Boundary Layer 343

7 Low-Reynolds Number Hydrodynamics 352
7.1 Lubrication Theory 352
7.2 Low-Inertia External Flows 355
7.3 Three-Dimensional Axisymmetric Flows 357
7.3.1 Solution using separation of variables 359
7.3.2 Uniform flow around a sphere/spherical cap 363
7.3.3 Motion of a spherical bubble in a fluid 365
7.3.4 Flow over a prolate spheroid 369
7.3.5 Flow through a conical tube 371
7.4 Flow Between Rotating Axially Symmetric Bodies 371
7.5 General Formulation for Two-Dimensional Problems 377
7.5.1 Uniform flow around a circular cylinder 378
7.5.2 Elliptical cylinder rotating in an unbounded viscous fluid 379

8 Compressible Fluid Flow 381
8.1 One-Dimensional Flow Equations 382
8.2 Acoustic Theory: The Wave Equation 384
8.2.1 Straight duct with specified acceleration at the left end and $p_\Delta = 0$ or $\partial p_\Delta/\partial x = 0$ at the other 391
8.2.2 Straight duct with specified acceleration at the left end and spring-mass system at the other 399
8.2.3 Pulsating sphere 400
8.2.4 Accelerated rigid sphere 411
8.2.5 Generalization of pulsating and oscillating sphere examples 418
8.2.6 Vibrating circular piston in an infinite rigid baffle 420
8.2.7 Pulsating circular cylinder 423
8.2.8 Accelerated circular cylinder in a rigid cylinder 430
8.3 Isentropic Flow Relations for a One-Dimensional Steady Flow Field 434
8.4 Solution of the One-Dimensional Flow Equations 436
8.5 Normal Shock 442
8.5.1 Stationary normal shock 442
8.5.2 Moving shock wave 444
8.5.3 Structure of a normal shock 447
8.6 Oblique Shock and Expansion Waves 451
8.6.1 Mach waves 452
8.6.2 Oblique shock relations 453

8.6.3 Prandtl–Meyer expansion waves 462
8.7 Shock-Expansion Theory 465
8.8 Isentropic Flow through Variable-Area Ducts 470
8.9 Area-Velocity Relation 472
8.10 Flow Through a Convergent-Divergent Nozzle 474
8.11 Unsteady One-Dimensional Flow Problems: Finite Waves 482
8.12 The Shock Tube Problem 484
8.13 Compressible Couette Flow 487

Appendices 492

A Governing Equations in Cylindrical Coordinates 492
B Governing Equations in Spherical Coordinates 494
C Governing Equations in Elliptic Cylindrical Coordinates 496
D Governing Equations in Bipolar Cylindrical Coordinates 498
E A General Solution to the Axisymmetric Laplace and Biharmonic Equations in Spherical Coordinates 500
F The Laplace Transform Method 507
G Fourier-series Expansion of some Functions 509

Bibliography 543
Answers and Hints to Selected Exercises 550
Index 565
