

CORALS

IN SPACE & TIME

THE BIOGEOGRAPHY & EVOLUTION
OF THE SCLERACTINIA

J.E.N. VERON

CONTENTS

PREFACE	ix
ACKNOWLEDGMENTS	xi
1 ABOUT THIS BOOK	1
The book at a glance	1
Geographic variation in species: first observations	3
Taxonomy and biogeography: a background	5
Background of this book	6
Data quality	8
Structure of the book	10
PART A INTRODUCTIONS AND REVIEWS	11
2 THE TAXONOMIC FRAMEWORK	13
The main topics	13
Morphological variation	14
Taxonomic methods and criteria	18
Historical background 18	Studies of co-occurring colonies 20
Numerical methods 23	Cladograms and cladistics 24
Field experimental studies 25	Studies of reproduction 25
Physiological studies 26	Molecular and genetic studies 26
Bridging taxonomic methods	30
3 INTRODUCING CORAL BIOGEOGRAPHY	34
The main topics	34
Biogeographic concepts	35
Centres of origin 36	Panbiogeography 39
Vicariance biogeography 40	Dispersion biogeography and the founder principle 43
Ecological biogeography 44	
Observations about coral distributions	45
Generic distributions 45	Species distributions 49
Explanatory coral biogeography	50
Centre of origin concepts 50	Vicariance concepts and cladistic biogeography 51
Dispersion biogeography 54	
Glacio-eustatic biogeography 54	Ecological biogeography 55
Palaeobiogeography 56	Biogeographic studies of specific geographic regions 56

4 SPECIES CONCEPTS AND SPECIES DIVERSITY	61
The main topics	61
General concepts of species and speciation	62
The 'neo-Darwinian synthesis' 63	64
Current species concepts 64	66
Current concepts as applied to corals 66	
Species diversity in corals	69
The community scale 71	75
The local scale 75	75
The regional scale 75	
5 REPRODUCTION AND POPULATION DYNAMICS	77
The main topics	77
Reproduction	78
Sexual modes 80	81
Synchrony 81	82
Reproductive isolating mechanisms 81	82
Geographic patterns and genetic control 82	
Self-fertilisation, out-crossing and hybridisation 83	
Species and population dynamics	84
Temporal change in species distributions 84	
Local abundance 86	86
Dispersion 86	
6 THE PHYSICAL ENVIRONMENT	89
The main topics	89
Latitude-correlated environmental parameters	90
Temperature 90	96
Light 96	98
Reef physical environments 98	
Surface circulation 99	
Non-latitude-correlated environmental parameters	99
Surface circulation 100	102
Regional environments 102	
PART B FOSSILS AND PALAEOCLIMATES	105
7 GEOLOGICAL BACKGROUND	107
The main topics	107
The Family Tree of Scleractinia	108
The Mesozoic	108
The Triassic 111	114
The Jurassic 114	115
The Cretaceous 115	
The Cenozoic	120
Palaeoclimates 120	123
Sea level changes 123	
Sea surface temperatures 127	128
Palaeoclimatic cycles 128	
8 THE CENOZOIC FOSSIL RECORD	130
The main topics	131
Genera	131
The Palaeogene 131	133
The Miocene 133	135
Cenozoic statistics 135	
Age patterns and diversity 139	
Species	141
Species from fossils? 141	143
The Plio-Pleistocene 143	
The Holocene 145	146
Geological longevity 146	
Concepts of macroevolutionary change	148
Macroevolution and the fossil record 148	151
Punctuated equilibria and the fossil record 150	151
Physical environment versus biological control 151	

PART C MODERN DISTRIBUTIONS	153
9 LONGITUDINAL DISTRIBUTIONS	
WORLD-WIDE	155
Global distributions of corals	155
Families 155 Genera 156 Species 160	
Regional patterns	161
The Gulf, the Red Sea and the western Indian Ocean	162
Central Indo-Pacific	163
Northern and equatorial Pacific	163
The southeast Pacific	165
The far eastern Pacific	166
The Caribbean, Gulf of Mexico and Bermuda	166
Brazil and the eastern Atlantic	168
Coral and coral reef distributions	168
Summary	169
10 LATITUDINAL DISTRIBUTIONS IN	
THE INDO-PACIFIC CENTRE OF DIVERSITY	171
The three latitudinal diversity sequences	171
Southern Papua New Guinea and eastern Australia	173
Western Australia	175
Philippines and Japan	177
Principal concepts of latitudinal attenuation	178
Connectivity ratchets	178
Equatorial connections	179
Rates of latitudinal attenuation	180
Environment versus genetic connectivity	181
Cross-shelf versus latitudinal gradients	183
High-latitude reefs and non-reef communities	184
Summary	186
11 GEOGRAPHIC CHARACTERISTICS OF	
INDIVIDUAL INDO-PACIFIC SPECIES	187
The size of distribution ranges	189
Latitudinal and longitudinal boundaries	189
Large and small distribution ranges	190
Characteristics of distribution ranges	193
Disjunct and contiguous distributions	193
Patterns within species ranges in the central Indo-Pacific	194
Morphology	195
Colour	197
Species abundances	199
Habitats	201
Behaviour	202
Patterns over the whole Indo-Pacific	203
Summary	206
PART D EVOLUTION	209
12 VICARIANCE AND RETICULATE	
EVOLUTION	211
The main topics	212
Surface circulation vicariance	212
The concept	212
Characteristics	213
Spatial and temporal patterns	215

Reticulate pattern formation	216
The concept 218	Characteristics and consequences 218
The evidence 220	Reticulate evolution in other organisms 222
Non-reticulate evolution 223	Synchronous evolution 223
The main conclusions	223
13 THE NATURE AND ORIGINS OF SPECIES	225
The main topics	226
The nature of species	226
Hierarchical levels in taxonomy and systematics	226
Operational taxonomic units	230
The origins of species	233
An evolutionary model: the known to the unknowable	236
The main conclusions	238
APPENDIX: CHARACTERS OF FAMILIES AND GENERA	240
Family Astrocoeniidae	240
Family Pocilloporidae	241
Family Acroporidae	242
Family Poritidae	245
Family Siderastreidae	247
Family Agariciidae	248
Family Fungiidae	249
Family Oculinidae	252
Family Pectiniidae	253
Family Meandrinidae	254
Family Mussidae	254
Family Merulinidae	256
Family Faviidae	257
Family Trachyphylliidae	262
Family Caryophylliidae	262
Family Dendrophylliidae	263
Numbers and morphological boundaries of taxa	264
GLOSSARY	266
ENDNOTES	275
LITERATURE CITED	287
INDEX	309
