Analysis of the Sponge [Porifera] Gene Repertoire: Implications for the Evolution of the Metazoan Body Plan		1
W.E.G. Müller, I.M. Müller		
1	Introduction	2
2	Sponges	3
3	Adhesion Between Cells	5
3.1	Cell-Cell Adhesion in Sponges	6
3.1.1	Galectin	7
3.1.2	The 36-kDa Putative AF	8
3.1.3	The 86-kDa AF-Associated Polypeptide	9
3.1.4	The Core Structure of the AF	9
3.1.5	The Putative AR	9
3.2	Cell-Matrix Adhesion in Sponges	10
3.2.1	Collagen	10
3.2.2	Fibronectin	12
3.2.3	Integrin	13
4	Growth and Differentiation	14
4.1	Primmorphs	15
4.2	Canal Formation	15
4.3	Proliferation	18
5	Migration of Cells - Contraction in Cell Layers	20
6	Elements of a Neuronal Network	21
7	Secretion of Skeletal Elements	21
8	Morphogens	22
8.1	Proteins	22
9	Apoptosis	25
9.1	Induction of Apoptosis in Sponges	25
9.2	Induction of Expression of Apoptotic Genes in Sponges	25
10	Conclusion: Contribution to the Origin of the Metazoan Body Plan	26
	References	28

Sponge-Associated Bacteria: General Overview and Special Aspects of Bacteria Associated with <i>Halichondria panicea</i>		35
J.F. Imhoff, R. Stöhr		
1	Introduction	35
2	General Considerations	37
2.1	Microscope Observations	37
2.2	Cultivation of Sponge-Associated Bacteria	38
2.3	Molecular Genetic Analysis of Sponge-Associated Bacteria	40
2.4	Symbiosis Between Bacteria and Sponges	42
2.5	Biologically Active Substances from Sponge-Associated Bacteria	43
3	Bacteria Associated with <i>Halichondria panicea</i>	46
3.1	Eubacteria Isolated from <i>Halichondria panicea</i>	47
3.2	Molecular Diversity of Eubacteria Within <i>Halichondria panicea</i>	49
3.3	Diversity of the <i>Cytophaga/Flavobacteria</i> Group	52
4	Conclusions	53
	References	54
Microbial Diversity of Marine Sponges		59
U. Hentschel, L. Fieseler, M. Wehrl, C. Gernert, M. Steinert, J. Hacker		
1	Introduction	59
2	Sponge-Microbe Associations	60
2.1	Sponges as Ancient Niches for Microorganisms	60
2.2	Bacterial Localization	62
2.3	Bacterial Morphotypes	64
3	Tools of Molecular Microbial Ecology	65
3.1	Cultivation-Dependent Techniques	66
3.2	Cultivation-Independent Techniques	67
3.2.1	Fluorescence In Situ Hybridization	69
3.2.2	Denaturing Gradient Gel Electrophoresis	70
3.2.3	16S rDNA Library Construction	70
4	A Uniform Microbial Community in Sponges from Different Oceans	71
4.1	Sponge Model Systems	71
4.1.1	<i>Aplysina aerophoba</i>	71
4.1.2	<i>Rhopaloides odorabile</i>	73
4.1.3	<i>Theonella swinhoei</i>	74
4.2	The Microbial Signature of Sponges	74
4.3	Sponge-Microbe Interaction Model	77
4.4	The Paradigm of Sponge-Microbial Symbiosis	78

5	Biotechnological Potential of Sponge-Associated Microorganisms	79
6	Conclusions and Future Directions	82
	References	83

Full Absolute Stereostructures of Natural Products Directly from Crude Extracts: the HPLC-MS/MS-NMR-CD 'Triad' 89
G. Bringmann, G. Lang

1	Introduction	90
2	Exemplarily for Naphthylisoquinoline Alkaloids: Constitutions and Relative Configurations by LC-MS/MS-NMR	90
3	Complemented by the LC-CD Option for the Online Assignment of Absolute Configurations: the Triad Is Complete!	93
4	Application of the Triad to the Online Structural Elucidation of New Naphthylisoquinoline Alkaloids and Related Compounds	94
5	An Application to Natural Phenylanthraquinones – Including Quantum Chemical CD Calculations and Total Synthesis	97
6	Stereochemistry of Axially Chiral Biscarbazoles in Plant Extracts, by LC-CD Coupling and CD Calculations	103
7	Without (True) Stereogenic Axes or Centers, but Chiral: a Bis-Bibenzyl Macrocyclic	104
8	First Time in Marine Natural Products Analysis: the Analytical Triad HPLC-MS/MS-NMR-CD	105
9	Conclusions	109

Bioactive Natural Products from Marine Invertebrates and Associated Fungi 117
P. Proksch, R. Ebel, R.A. Edrada, V. Wray, K. Steube

1	Introduction: Some Current Issues of Marine Natural Products Research	117
2	Ecological Functions of Sponge Alkaloids	121
2.1	Defensive Pyridoacridine Alkaloids from the Tropical Sponge <i>Oceanapia</i> sp.	122
2.2	Chemical Defense of Mediterranean <i>Aplysina</i> Sponges	124
3	Pharmacologically Active Constituents from Marine Invertebrates	127

3.1	Swinhoeiamide A: a New Calyculin Derivative from the Sponge <i>Theonella swinhoei</i>	127
3.2	Bromopyrrole Alkaloids from the Sponge <i>Stylissa carteri</i> (syn. <i>Axinella carteri</i>)	128
3.3	Staurosporine Derivatives from the Tunicate <i>Eudistoma toetalensis</i> and the Flatworm <i>Pseudoceros</i> sp.	129
4	Sponge-Associated Fungi as a New Source for Bioactive Metabolites	132
4.1	New Natural Products Isolated from Fungi Associated with the Marine Sponge <i>Aplysina aerophoba</i>	133
4.2	New Natural Products Isolated from Fungi Associated with the Marine Sponge <i>Xestospongia exigua</i>	135
5	Conclusions	137
	References	138

Sustainable Use of Marine Resources: Cultivation of Sponges 143
F. Brümmer, M. Nickel

1	Introduction	144
2	In Situ Cultivation of Bath Sponges	146
3	Sponge Farming	147
4	Ex Situ Maintenance of Sponges in Aquaria	149
5	In Vitro Cultivation of Sponges	154
6	Conclusions and Future Directions	157
